RESOURCE GUIDE · 2026

Scaling Up: Unlocking Major Grants and Funding Above \$500K

Ready to scale your next major initiative? Our September 2026 eBook features a handpicked selection of elite grants, fellowships, awards, and funding streams valued at \$500,000 and up. Spanning research, climate action, health, tech, and social change, this essential resource empowers institutions and innovators to secure the capital needed for transformative, large-scale impact.

In This Guide

- 01** Combating Forced Labor in Global Supply Chains Through Strategic Partnerships
- 02** Hosting the 2030 World Urban Forum to Shape Sustainable Human Settlements
- 03** Call for Host Nations to Lead Global Urban October Observances
- 04** Recognizing Frontline Frontline Humanitarian Heroes Through Research Fellowships
- 05** Advanced STEM Fellowship Supporting Mid-Career Research Leaders
- 06** Empowering Investigators in Cancer Immunotherapy Through Flexible Research Awards
- 07** Advance Clinical Oncology and Novel Immunotherapy Approaches
- 08** Empowering Applied Agricultural, Food, and Bioenergy Research
- 09** Scaling Grassroots Innovations to Combat Poverty and Inequality
- 10** Nurturing Feminist Movements and Cross-Movement Collaborations
- 11** Simplified and Affordable Pathogen Genomic Surveillance Workflows
- 12** Empowering Established Researchers for Transformative Health Discoveries
- 13** Scaling Ambitious Biodiversity Conservation Across UK Overseas Territories
- 14** Ninth Edition of Country-Led Food Security and Agricultural Initiatives
- 15** Borderlands V West Africa Programme for Regional Stability and Cohesion
- 16** West Africa Clean Cooking Fund for Sustainable Household Energy Transition
- 17** Middle East Regional Cooperation Program for Applied Scientific Partnerships
- 18** Fast Track to the EIC Accelerator for Eurostars-3 Innovators
- 19** Empowering Urban Resilience: Transnational Call for Climate-Neutral Cities
- 20** Advancing Cinematic Excellence: The Netherlands Film Production Incentive
- 21** Pioneering Trustworthy AI: The DeepRAP Cognitive Systems Challenge
- 22** Safeguarding Rights and Social Cohesion: Public Procedure for Christian Minorities
- 23** Tackling Global Health Crises: The Wellcome Snakebite Innovation Prize
- 24** Boosting Sustainable Tourism: Mediterranean Multi-Programme Mechanism Call
- 25** Unlocking Regional Potential Through Artificial Intelligence: The 2026 ASEAN Science, Technology and Innovation Call
- 26** Advancing Responsible Artificial Intelligence: Open-Source Wellbeing Benchmarks and Evaluation Grants
- 27** Safeguarding Vital Waters: Mediterranean Freshwater Ecosystem Conservation and Restoration Funding
- 28** Accelerating Academic Breakthroughs: The Distinguished Innovator Grant for Senior Researchers
- 29** Bridging Discovery and Proof-of-Concept: The Pioneer Innovator Grant for Nordic Academic Teams
- 30** Empowering Cinematic Artistry: Feature Film and Long Animated Film Production Realization Scheme
- 31** Supporting Ambitious Dutch Feature and Animation Films Through Specialized Production Grants

- 32** Advancing Regenerative Whole-Farm Systems in Extremadura's Agricultural Sector
- 33** Accelerating the Market Adoption of Scalable Digital Healthcare Solutions Across Europe
- 34** Alternative Financing for Unconventional and Bold Creative Filmmaking Ventures
- 35** Empowering High-Potential European Healthcare Start-Ups Through Targeted Growth Support
- 36** Advanced Quantum Key Distribution Systems and Secure Communication Networks
- 37** Unlocking Next-Generation Capabilities Through European Neutral-Atom Quantum Research
- 38** Empowering Creative Enterprises: The European Cultural and Creative Startups Call
- 39** Advancing Applied Quantum Innovation Through International Eureka Collaboration
- 40** Bridging Borders: Collaborative G7-Nordic Quantum Technologies Research Initiative
- 41** Investigating Artificial Intelligence Integration in Modern Nordic Workplaces
- 42** Leveraging Space-Enabled Solutions to Revolutionize Global Road and Traffic Safety
- 43** Advancing Sustainable Solid Biofuels and High-Efficiency Regional CHP Systems
- 44** Deep Geothermal Resource Assessment and Advanced Exploration Innovations
- 45** Secure Energy Data Sharing and Open-Source AI Foundation Models
- 46** Innovative Photovoltaic System Designs for Agrivoltaics and Offshore Energy
- 47** Transnational Pre-Commercial Procurement for Renewable Fuel Technologies
- 48** Empowering Grassroots Organizations to Combat Gender-Based Violence and Violence Against Children
- 49** Advancing Integrated Child Protection Systems Through Cross-Sector Collaboration
- 50** Establishing Comprehensive Protection and Support Services for Survivors of Gender-Based Violence
- 51** Empowering Public Authorities to Implement the Istanbul Convention and Violence Against Women Directive
- 52** Proactive Prevention Strategies to Combat Gender-Based and Online Violence
- 53** Catalysing Biotechnology Innovations and Interventions for Healthy Longevity
- 54** Strengthening Situational Awareness and Security for Submarine Cable Infrastructure
- 55** Boosting Transport Resilience with Advanced AI and Digital Tech
- 56** Scaling Agrobiodiversity for European Food Security and Farm Resilience
- 57** Protecting Mangrove Ecosystems and Advancing Blue Carbon Initiatives
- 58** Empowering Vulnerable Youth for the Green Transition
- 59** Cross-Border Small-Scale Projects for Circular Economy and Sustainable Tourism
- 60** Strengthening Institutional Capacity Through Greece-Italy Cooperation
- 61** Institutional Strengthening Initiative for Open Data and Privacy Frameworks in Albania
- 62** National Health Research Enterprise Support for Priority Infectious Diseases in South Africa
- 63** Targeted Research Grants for Women, Maternal, and Child Health Across South Africa
- 64** Civil Society Thematic Action Grants for Green Transition and Women's Empowerment in Indonesia

- 65** Technical Assistance Program for Standardizing Loss and Damage Assessments in Kyrgyzstan
- 66** Fritt Ord Foundation Open Call for Independent Norwegian Journalism Projects
- 67** Vienna Business Hub Expansion and Relocation Support Initiative
- 68** UK Atmospheric Science and Aerial Autonomy Technology Grant Initiative
- 69** First Nations Culturally Led Disaster Recovery Support Program for NSW
- 70** Ontario Community Sport and Recreation Facility Repair and Rehabilitation Fund
- 71** Scottish Community Energy Generation and Renewable Infrastructure Growth Fund
- 72** Ontario Major Sport and Recreation Infrastructure New Builds Initiative
- 73** Conserving Critical Wildlife Habitats Through Permanent Land Acquisition
- 74** Advancing Sustainable AI Through High-Risk Research Innovations
- 75** Strengthening Water Utility Workflows Through Specialized Training Initiatives
- 76** Expanding Comprehensive Support Networks for Human Trafficking Survivors
- 77** Driving Knowledge-Based SME Innovation in the Danish Market
- 78** Empowering Agricultural Producers Through Comprehensive Risk Management Education
- 79** Empowering Families of Young Children with Developmental Needs in Western Australia
- 80** Advancing Clean Energy Solutions to Protect Forests and Reduce Wood Fuel Dependency in Central Africa
- 81** Promoting Inclusion, Rights, and Protection for Children with Disabilities in Egypt
- 82** Catalyzing Social Cohesion and Peacebuilding Initiatives Across Communities in Syria
- 83** Recruiting and Retaining Leading Biomedical Research Talent at Danish Host Institutions
- 84** Enhancing Didactic Skills and Professional Development for Science Educators in Denmark
- 85** Knowledge Partnership II Initiative Call for University Cooperation and Applied Research
- 86** Mission Climate-Neutral City: Research, Technology, and Innovation Open Call
- 87** National Urban and Community Forestry Challenge Cost Share Grant Program
- 88** Expanding Global Health Security Through Local Partnerships Grant Opportunity
- 89** R&D Infrastructure Development Program in the Tkuma Region
- 90** Impact Innovation Call for Research Expertise in Sustainable Metals and Minerals
- 91** Supporting Specialized Anti-Organized Crime and Corruption Departments in Bosnia and Herzegovina
- 92** Empowering Irish Creatives Through the TV Drama Production Grant Programme
- 93** Empowering Indian Civil Society for Inclusive Governance and Sustainable Growth
- 94** Advancing Integrated Water Resources Management and Climate Resilience in Ethiopia
- 95** Driving Circular Economy Innovation and Green Solutions in the Kyiv Region
- 96** The Albania Reintegration Partnership: Supporting Sustainable Returns
- 97** Advancing Pastoral Climate Resilience: Joint Research and Technology Proposals

- 98** Canada's Sectoral Workforce Innovation Fund: Collaborative Labour Solutions
- 99** Near East Regional Assistance Program: Strategic U.S. Diplomatic and Economic Grants
- 100** Malta Interest Subsidy Scheme: Supporting Band Club Infrastructure and Culture
- 101** UK Createch Infrastructure: CoSTAR Showcase Labs Commercialisation Grants
- 102** Expanding UK Creative R&D: CoSTAR Satellite Labs Accessible Infrastructure Open Call
- 103** International Space Sector Partnership and Innovation Grants
- 104** Domestic Tin Can Manufacturing Facility Support Program
- 105** Fisheries Industry Decarbonization and Energy Efficiency Grants
- 106** UK-Singapore Industrial Research and Development Collaboration
- 107** Electricity Demand Turn Up Trial for Flexibility Providers
- 108** State and Tribal Support for Child and Youth Trafficking Survivors
- 109** Establishing Private Angel Networks to Boost Early-Stage Tech Investment
- 110** Collaborative Marine Energy Research and Blue-Tech Innovation Grants
- 111** Empowering Zimbabwean Women's Rights Organizations for Gender Equality and Inclusion
- 112** Academic Startup Acceleration Through CZS Innovation Teams Funding
- 113** Twinning Partnership for Phytosanitary Systems and Food Safety in The Gambia
- 114** Regional Innovation Valleys: Advancing Circular Economy Solutions in Greece
- 115** Empowering Agroforestry and Forest Restoration Initiatives in Karamoja
- 116** Advancing Collaborative Industrial Research and Breakthrough Technologies in Luxembourg
- 117** Expanding Heavy-Duty Electric Vehicle Charging Networks Across Sweden
- 118** Driving Regenerative Agriculture and Farmer Advisory Networks in Lower Silesia
- 119** Boosting Advanced Manufacturing Competitiveness and Innovation Capacity in Ontario
- 120** Accelerating Maritime Decarbonization Through Port-Based Vessel Charging in Sweden
- 121** Unlocking Concessional Finance for Nature-Based Tourism Enterprises in Uganda
- 122** Scaling Clean Cooking and Climate Action in Ethiopian Schools
- 123** Advancing Central Banking Standards and European Integration in Moldova
- 124** Recruiting Global Neuroscience Leaders to Danish Academic and Clinical Institutions
- 125** Strengthening Flood and Cyclone Community Preparedness Across Mozambican Districts
- 126** Driving Austria's Clean Energy Transition Through Targeted Innovation Research
- 127** Empowering Global South and Danish Partnerships for Inclusive Development
- 128** Technical Assistance Initiative for Climate Loss and Damage Assessment in Haiti
- 129** Graduate and Postgraduate Fellowships in Food and Agricultural Sciences
- 130** Translational Research Grants for Non-Communicable Disease Mitigation in South Africa

131 Strengthening Polish Civil Society Resilience Against Digital Disinformation

01. Combating Forced Labor in Global Supply Chains Through Strategic Partnerships

DONOR: U.S. Department of Labor

International supply networks frequently grapple with the systemic challenge of goods produced under exploitative conditions, making proactive intervention essential for ethical global trade. This federal initiative focuses on strengthening the institutional capacity of diverse entities to effectively identify, prevent, and address forced labor practices wherever they manifest in international commerce. Organizations of all types—including commercial entities, educational institutions, international bodies, community groups, and faith-based organizations—are welcomed to participate without administrative barriers related to religious affiliation. Successful applicants receive substantial financial backing to build rigorous monitoring systems, enhance stakeholder coordination, and implement preventive measures across complex trade routes. By empowering civil society and institutional partners alike, the program aims to safeguard vulnerable workers and promote transparency across international markets. Our editorial team encourages eligible mission-driven organizations with expertise in labor rights, supply chain auditing, or human rights advocacy to review the full solicitation details ahead of the late September 2026 deadline.

02. Hosting the 2030 World Urban Forum to Shape Sustainable Human Settlements

DONOR: UN Habitat

As rapid global urbanization reshapes communities worldwide, international dialogue on sustainable housing and human settlements has never been more critical. The United Nations Human Settlements Programme has initiated a global call inviting countries to step forward as hosts for a major international urban gathering scheduled for 2030. This flagship event brings together policymakers, municipal leaders, civil society organizations, and expert practitioners to share practical solutions, policy insights, and innovative practices for inclusive urban development. Core thematic priorities include expanding adequate housing, advancing sustainable urbanization, improving collective knowledge through specialized training, and building powerful global coalitions to amplify resource impact. Host candidates must demonstrate a strong commitment to urban sustainability and provide a substantial financial cash contribution to support the implementation of global priorities and the New Urban Agenda. For nations and urban centers looking to position themselves at the forefront of global municipal governance and sustainable planning, preparing a competitive bidding proposal offers a remarkable platform for international leadership ahead of the late November 2026 deadline.

03. Call for Host Nations to Lead Global Urban October Observances

DONOR: UN Habitat

Promoting equitable, prosperous, and inclusive human settlements requires sustained international cooperation and localized action year after year. The United Nations Human Settlements Programme is currently accepting expressions of interest from countries wishing to host the prestigious global observances for World Habitat Day and World Cities Day. The upcoming focal themes direct international attention toward transforming informal settlements and slums, as well as addressing the complex challenges of financing adequate housing. Host countries are encouraged to leverage these high-profile occasions during Urban October to recognize best urban practices, raise awareness of sustainable development trends, and promote innovative public policies. Interested governments must commit to specific financial contributions directed toward the event's coordination for either individual observance or both combined. This opportunity provides a powerful vehicle for nations to showcase their dedication to sustainable urban futures, foster international partnerships, and inspire collective responsibility for towns and cities worldwide before the closing date in late September 2026.

04. Recognizing Frontline Frontline Humanitarian Heroes Through Research Fellowships

DONOR: Aurora Humanitarian Initiative

Countless local humanitarian workers operate under extreme pressure in regions impacted by violent conflict and severe crises, often lacking the global visibility they deserve. The Aurora Humanitarian Initiative has established a specialized research fellowship program designed to spotlight these unsung grassroots humanitarians and document frontline interventions accurately. Participants engage in rigorous research activities, utilizing diverse sources to produce clear, responsible English-language profiles that highlight urgent humanitarian challenges and contribute to the selection process for a major international prize. This engagement fosters a vibrant global community committed to honoring courageous actors while strengthening public awareness of overlooked crises. Successful participants receive a financial stipend in recognition of their scholarly contributions, and those whose nominated candidates advance to finalist status are invited to attend a high-profile global ceremony. Our editorial team views this ongoing opportunity as a vital pathway for researchers and advocates eager to amplify the voices of courageous local changemakers on the international stage.

05. Advanced STEM Fellowship Supporting Mid-Career Research Leaders

DONOR: Royal Society

Dynamic and frontier-pushing scientific inquiry often requires long-term institutional stability and flexible resourcing to achieve breakthroughs that benefit society. Designed to attract and retain outstanding researchers from both the UK and international settings, this prestigious mid-career fellowship program empowers exceptional scientific leaders to build world-class research groups. Eligible fields span the entire breadth of STEM disciplines—including biological sciences, chemistry, engineering, physics, and mathematics—with a strong emphasis on addressing complex scientific questions and fostering technological resilience. The initiative accommodates diverse personal circumstances by offering provisions for part-time working, career breaks, and financial support for childcare needs during research travel. Successful mid-career investigators benefit from robust, decade-long financial support covering core research operations and specialized equipment needs. Researchers with between ten and twenty years of post-PhD experience who hold permanent academic posts or long-term fellowships are encouraged to prepare their applications ahead of the September 2026 deadline, utilizing fast-track visa pathways where applicable.

06. Empowering Investigators in Cancer Immunotherapy Through Flexible Research Awards

DONOR: Cancer Research Institute

Transformative breakthroughs in tumor immunology frequently stem from bold, unconventional hypotheses pursued by visionary scientists willing to take calculated risks. Honoring the pioneering legacy of a legendary immunologist, this specialized research program offers long-term and highly flexible support to mid-career investigators dedicated to paradigm-shifting discoveries in cancer immunotherapy. The initiative seeks to identify creative minds capable of framing non-obvious questions, bridging diverse scientific disciplines, and exploring novel pathways that push the boundaries of immune-based cancer treatments. Selected institutions receive multi-year financial backing along with supplementary indirect cost allocations to ensure investigators can devote the vast majority of their professional time directly to bench science. Eligible applicants must hold doctoral-level medical or scientific degrees, occupy specific tenure-track faculty ranks, and demonstrate an unwavering commitment to frontline research. With no citizenship restrictions and applicability across international research institutions, this mid-January 2027 deadline presents an exceptional avenue for ambitious immunologists seeking the freedom to pursue revolutionary therapies.

07. Advance Clinical Oncology and Novel Immunotherapy Approaches

DONOR: Cancer Research Institute

Academic researchers and clinician-scientists are invited to lead investigator-initiated clinical trials focused on breakthrough cancer immunotherapies through this targeted funding initiative. Designed to tackle high unmet needs in oncology, the program prioritizes innovative phase I/II or phase II clinical studies that uncover vital mechanistic insights into patient responses and validate predictive biomarkers. Awardees gain crucial financial backing to cover investigator salaries, patient care expenses, essential research supplies, correlative assays, and comprehensive data analyses. Grantees are also encouraged to leverage data-sharing networks and may benefit from strategic trial design guidance throughout the lifecycle of their study. Special collaborative tracks are available for dedicated disease-focused investigations, providing researchers with access to specialized biological models and tumor samples. Eligible participants include principal investigators based at accredited medical schools and research centers globally, ensuring a diverse range of international clinical insights can contribute to transforming modern cancer treatment paradigms.

08. Empowering Applied Agricultural, Food, and Bioenergy Research

DONOR: Lantmännen Research Foundation

Research teams and academic institutions worldwide can now apply for flexible project funding designed to generate practical, actionable knowledge for farm-level applications and agricultural operations. The open call encompasses three broad thematic domains: agricultural machinery and farming systems, food and human health innovations, and bioenergy alongside green materials. Successful initiatives typically span anywhere from a few months up to several multi-year timelines, accommodating a diverse cohort of selected projects annually. Before submitting a formal proposal, interested teams are strongly encouraged to engage with program organizers to discuss preliminary concepts, verify alignment with strategic goals, and explore potential collaborative synergies. Proposals must follow structured formatting guidelines, featuring a popular scientific summary, comprehensive methodological frameworks, detailed work plans, dissemination and intellectual property strategies, and team member role descriptions. Eligible applicants include qualified investigators affiliated with universities, colleges, independent institutes, and active research-driven corporate entities operating on both national and international scales.

09. Scaling Grassroots Innovations to Combat Poverty and Inequality

DONOR: Fund for Innovation in Development **GRANT SIZE:** More than \$1 million

Organizations and collaborative collectives operating across developing regions can access continuous funding opportunities tailored to spark, test, and scale ground-level solutions for disadvantaged populations. The open-ended framework welcomes novel interventions across any developmental stage and sector, provided they are executed within qualifying low- and middle-income nations. To accommodate diverse stages of organizational growth and evidentiary maturity, the funding architecture offers multiple progressive tiers. These pathways support foundational preparation activities, preliminary piloting, rigorous impact assessments, policy integration studies, and ambitious large-scale deployment phases. Funding thresholds scale directly in proportion to an innovation's demonstrated cost-effectiveness, empirical backing, and potential for widespread systemic impact. Eligible candidates encompass virtually all structured organizational types and multi-entity consortia, while individual practitioners, international governing bodies, and specified excluded territories remain ineligible to apply for these developmental awards.

10. Nurturing Feminist Movements and Cross-Movement Collaborations

DONOR: Equality Fund **GRANT SIZE:** \$500,000 to \$1 million

Feminist organizations and allied change-makers can secure multi-year support aimed at strengthening institutional infrastructure, deepening relational ties, and expanding collective capacity to drive systemic social transformation. The initiative reinforces the vital work of women, girls, and gender-expansive communities by resourcing strategic collaborations that tackle complex societal challenges together. Selected partnerships receive substantial financial backing over an initial multi-year implementation window, with prospective opportunities for future extension based on program evolution. The funding mechanism is structured to accommodate varied governance arrangements, tailoring award allocations based on the proposal's scope and the lead organization's financial management capacity. Eligible applicants must be formalized collaborative networks linking feminist actors with relevant movement allies. While traditional government bodies, political parties, commercial enterprises, and individual actors cannot serve as primary applicants, they are welcome to participate in collaborative activities independently.

11. Simplified and Affordable Pathogen Genomic Surveillance Workflows

DONOR: Gates Foundation

Global research consortia, academic institutions, and technology developers are invited to engineer low-cost, simplified pathogen sequencing workflows tailored for routine public health use in resource-constrained regions. Historically, high operational expenses, technical complexities, and logistical bottlenecks have hindered the routine deployment of genomic surveillance for critical outbreak response and disease monitoring. This collaborative funding initiative seeks to overcome these barriers by driving down per-sample sequencing costs and streamlining protocols for a wide spectrum of priority viral, bacterial, and parasitic pathogens. To foster rapid translation, the program utilizes a tiered award architecture spanning early feasibility explorations, mid-stage technical development, and advanced multi-year validation phases. Eligible participants comprise nonprofit entities, academic departments, commercial enterprises, government agencies, and international organizations committed to strengthening global health security, provided they meet standard compliance and anti-sanction requirements.

12. Empowering Established Researchers for Transformative Health Discoveries

DONOR: Wellcome Trust

Established multidisciplinary research teams seeking to push the frontiers of human life, health, and wellbeing can apply for substantial, long-term funding designed to support ambitious scientific inquiries. The funding scheme prioritizes bold, creative hypotheses that promise to generate profound shifts in scientific understanding, pioneer novel methodological frameworks, or develop advanced technological tools beneficial to the broader health research community. Successful programs enjoy extended operational timelines spanning multiple years, granting investigators the necessary runway to tackle highly complex, long-term scientific challenges. While standard funding thresholds accommodate major research programs, exceptionally large budgetary requests undergo rigorous administrative scrutiny to verify resource optimization. Eligibility is open to visionary researchers and collaborative teams who can clearly demonstrate their capacity to make landmark contributions and reshape existing paradigms within their respective fields.

13. Scaling Ambitious Biodiversity Conservation Across UK Overseas Territories

DONOR: Darwin Plus

Our editorial team is tracking a major funding stream designed to support large-scale, collaborative environmental initiatives within the UK Overseas Territories. This scheme targets systemic drivers of biodiversity loss and aims to secure long-term protection for delicate, complex ecosystems and endemic species. Successful applicants will undertake multi-year projects that demonstrate robust evidence from previous smaller-scale efforts, successfully scaling up proven conservation models. The application pathway involves an initial eligibility review, independent assessment by advisory specialists, and a detailed clarification stage featuring virtual interviews and due diligence checks before final confirmation. Reviewers place heavy emphasis on strategic value, requiring teams to exhibit exceptional ambition, cross-territory cooperation, and lasting ecological impact. Eligible organizations can apply for substantial multi-year awards to foster system-wide environmental shifts and fulfill international sustainability commitments.

14. Ninth Edition of Country-Led Food Security and Agricultural Initiatives

DONOR: Global Agriculture & Food Security Program

Our research desk highlights a prominent global financing opportunity aimed at strengthening agricultural productivity, rural livelihoods, and resilient food systems. Amid rising hunger, economic instability, and climate shocks, this initiative supports context-specific innovations that simultaneously advance critical crosscutting priorities like climate resilience, gender empowerment, and improved nutrition. NGOs and project implementers are encouraged to forge strong public-private collaborations, secure meaningful co-financing contributions, and establish credible pathways for private sector engagement that extend far beyond the project lifecycle. The selection process favors integrated, scalable solutions that strategically incorporate natural resource management, water security, and biodiversity protection into medium- and long-term development plans. Participating organizations gain vital resources to combat food insecurity and foster sustainable rural entrepreneurship.

15. Borderlands V West Africa Programme for Regional Stability and Cohesion

DONOR: European Commission

Our editorial coverage features a significant European funding opportunity aimed at preventing conflict spillover and enhancing socio-economic stability within targeted border zones in West Africa. The programme focuses on expanding livelihood opportunities for vulnerable groups such as women and youth, promoting sustainable natural resource management, and countering cross-border trafficking and violent extremism. Eligible lead applicants—including non-profit NGOs, international organizations, and local authorities—must build robust cross-border consortia with active partners in each target intervention zone. Projects must span a multi-year duration and require a portion of non-EU co-financing to complement the substantial international grant allocation. Successful implementers will demonstrate deep operational capacity in fragile contexts and an unwavering commitment to human rights and inclusive regional cooperation.

16. West Africa Clean Cooking Fund for Sustainable Household Energy Transition

DONOR: The Worthington Companies Foundation

Our resource team draws attention to a regional initiative dedicated to overcoming the severe environmental degradation and health hazards tied to traditional biomass cooking fuels. Operating across numerous West African nations, this fund supports impact-driven organizations that deploy liquefied petroleum gas infrastructure, community education campaigns, and consumer financing mechanisms. A core pillar of the programme is the intentional empowerment of women, positioning them as central decision-makers and leaders in household energy adoption and advocacy. Implementing partners are expected to maintain strict safety standards, submit rigorous quarterly progress reports, and collaborate closely with local communities and public institutions. Through a blend of technical deployment and grassroots behavior change, the initiative fosters healthier households and cleaner, more resilient community energy practices.

17. Middle East Regional Cooperation Program for Applied Scientific Partnerships

DONOR: Assistance Coordination

Our editorial desk presents a collaborative research opportunity uniting technical experts, academic institutions, and civil society organizations across the United States, Israel, and the broader Middle East and North Africa. The program prioritizes applied scientific research that addresses shared regional challenges while simultaneously expanding technological leadership, fostering commercialization, and generating long-term economic stability. To qualify, project consortia must bridge researchers from Israel and at least one eligible MENA territory, integrating U.S. participation where it contributes technical depth or market connectivity. Successful proposals must move well beyond basic research, outlining a practical roadmap for scaling innovations and securing tangible regional benefits. Selected partnerships receive substantial financial backing to turn collaborative science into engines for peaceful regional growth.

18. Fast Track to the EIC Accelerator for Eurostars-3 Innovators

DONOR: Eureka Network **GRANT SIZE:** More than \$1 million

Our research team highlights an accelerated pathway that enables high-performing startups and SMEs to bypass preliminary proposal stages and enter the full evaluation phase of a major European innovation fund. Aimed at deep tech companies that have successfully concluded a Eurostars-3 project, this mechanism fast-tracks ambitious enterprises scaling market-disrupting innovations. Eligible businesses must possess strong intellectual property rights and submit comprehensive application materials, including a concise pitch deck for expert panel review. Those that successfully pass the expert pitching evaluation unlock access to a comprehensive blend of equity-free grants, investment capital, and dedicated business coaching. This opportunity offers a streamlined route for scaling high-impact technologies within competitive global markets.

19. Empowering Urban Resilience: Transnational Call for Climate-Neutral Cities

DONOR: DUT Partnership **GRANT SIZE:** More than \$1 million

Our editorial team is excited to highlight this major funding opportunity designed to help municipalities and regional stakeholders tackle pressing urban challenges head-on. This collaborative European initiative seeks to accelerate the transformation of metropolitan areas toward absolute climate neutrality and long-term resilience through rigorous research and practical innovation. Successful applicants will focus their efforts on advancing one of three core transition pathways: creating accessible neighborhood frameworks, fostering circular urban economies, or establishing sustainable positive energy districts. To be eligible, applicants must form robust transnational consortia that bring together at least three distinct partners across three participating nations, ensuring that local government authorities or municipalities play a central leadership role alongside research organizations, enterprises, civil society groups, and the cultural sectors. The program typically supports comprehensive initiatives with substantial budgets, encouraging cross-border cooperation to share best practices and test scalable solutions. By bridging the gap between local governance and cutting-edge research, this call empowers urban communities to design adaptive strategies that secure a sustainable, low-carbon future for residents across the region.

20. Advancing Cinematic Excellence: The Netherlands Film Production Incentive

DONOR: Netherlands Film Fund **GRANT SIZE:** More than \$1 million

Independent production companies looking to elevate high-quality audiovisual works while boosting local creative industries will find significant value in this national support scheme. The initiative aims to stimulate domestic production activity, foster emerging creative talent, encourage cultural diversity, and guarantee the broad theatrical distribution of qualifying feature films, long documentaries, and animated projects. Eligible applicants must be established independent legal entities with a proven multi-year track record in film exploitation and production, having previously steered a qualifying majority production to theatrical release. Projects seeking support must meet specific financial thresholds regarding total production budgets and verified local spending within the region, and they must secure a substantial portion of their financing unconditionally from independent third parties prior to submission. Furthermore, applicants must guarantee a proper theatrical release to ensure that audiences can readily engage with the completed works. Evaluated through a rigorous competitive point system, successful productions not only benefit from a substantial financial cash rebate on qualifying local expenses but also contribute meaningfully to the broader cultural vitality and international competitiveness of the regional film sector.

21. Pioneering Trustworthy AI: The DeepRAP Cognitive Systems Challenge

DONOR: European Commission (EC)

This European Commission challenge invites visionary innovators and researchers to push the boundaries of artificial intelligence by developing next-generation cognitive systems centered on deep reasoning, abstraction, and planning. The program seeks to overcome the fundamental limitations of traditional neural and symbolic approaches, supporting novel technological frameworks—such as neuro-symbolic architectures and advanced reinforcement learning—that can operate effectively under constrained computational resources. Selected projects will tackle complex real-world application domains ranging from scientific discovery and industrial mobility to civil security, healthcare, and human-robot interaction. Proposals must demonstrate a strong commitment to ethical and legal alignment, incorporating robust trustworthiness mechanisms that guarantee transparency, fairness, explainability, and strict adherence to fundamental rights and regulatory standards. Beneficiaries are expected to advance their technologies to higher technology readiness levels, integrate multimodal data handling, and follow FAIR data principles to ensure seamless interoperability with broader European research infrastructures and platforms. By fostering collaborative communities and joint pilot demonstrations, this initiative aims to cement regional leadership in safe, human-centric cognitive artificial intelligence.

22. Safeguarding Rights and Social Cohesion: Public Procedure for Christian Minorities

DONOR: Italian Agency for Development Cooperation

This specialized public comparative procedure provides vital support for civil society and humanitarian interventions aimed at protecting and uplifting vulnerable Christian minority communities around the globe. The program focuses on fostering social cohesion, promoting interreligious dialogue, combating discrimination, and addressing the fundamental socio-economic and basic needs of populations situated in contexts marked by structural fragility, conflict, or crisis. Interventions are carefully structured across multiple geographic lots to target specific regions across Africa, the Middle East, and Asia, often complementing existing host-country refugee assistance and local community support mechanisms. Eligible organizations are invited to propose multi-year projects that drive true reconciliation, protect human rights, and build safe, sustainable, and inclusive societies in alignment with global development goals. The initiative ensures substantial financial backing for each approved project, enabling implementers to deliver deep, lasting impacts on the ground. Through targeted capacity building and community-level engagement, the procedure empowers local actors to strengthen institutional resilience and create just environments where all minority groups can thrive safely and equitably.

23. Tackling Global Health Crises: The Wellcome Snakebite Innovation Prize

DONOR: Wellcome

This global innovation prize addresses a devastating and historically neglected public health crisis affecting millions of vulnerable rural, poor, and agrarian communities across regions in Sub-Saharan Africa, South Asia, South-East Asia, and Latin America. The program is designed to unearth and accelerate practical, cross-disciplinary solutions that overcome critical barriers in snakebite care, whether by strengthening grassroots community responses, speeding up diagnosis, or improving the delivery and accessibility of life-saving treatments. Innovators from diverse fields—including multidisciplinary research teams, community leaders, and rural health workers with firsthand experience of the issue—are strongly encouraged to bring forward bold, impactful ideas. The initiative provides a structured pathway of support, distributing substantial seed funding and bespoke developmental assistance during an initial finalist phase to help teams refine their approaches. In the ultimate stage, top-performing teams receive major financial awards to fully scale, implement, and embed their solutions by the end of the decade. By catalysing grassroots ingenuity and targeted medical interventions, this prize aims to drastically reduce preventable deaths and life-altering disabilities caused by venomous snakebites worldwide.

24. Boosting Sustainable Tourism: Mediterranean Multi-Programme Mechanism Call

DONOR: Interreg NEXT MED

This collaborative funding call unites multiple Interreg programs to support capitalization projects that drive innovation, resilience, and sustainable growth across the Mediterranean region's tourism sector. The initiative is structured around key thematic priorities, encouraging a smarter and more competitive economic transformation through advanced technologies, enhanced research capacities, and improved competitiveness for micro, small, and medium-sized enterprises. At the same time, it champions the green transition by supporting climate change mitigation, disaster risk reduction, resource efficiency, and circular economy approaches within tourism operations. A further core focus is placed on building a more social and inclusive Mediterranean through equal opportunities, better local governance models, and strengthened dialogue between citizens, institutions, and civil society actors. Eligible public and private legal entities established within the designated cooperation area can apply for project funding, provided they have been registered for a mandatory multi-year period prior to the call launch. By fostering cross-border cooperation and innovative tourism products, the mechanism empowers regional stakeholders to build a thriving, sustainable, and future-proof visitor economy.

25. Unlocking Regional Potential Through Artificial Intelligence: The 2026 ASEAN Science, Technology and Innovation Call

DONOR: ASEAN Committee on Science, Technology and Innovation (COSTI)

As artificial intelligence rapidly reshapes the global landscape, the ASEAN Committee on Science, Technology and Innovation invites collaborative research teams to tackle pressing regional issues under a unified thematic framework. This competitive funding opportunity is designed to support pioneering scientific and technological initiatives that foster a resilient and competitive region across targeted domains, including healthcare advancements, bioeconomy security, environmental and climate intelligence, energy transitions, and the modernization of small and medium enterprise productivity. Teams must consist of partners spanning at least two member states to ensure cross-border cooperation, designing solutions that directly address shared challenges. Eligible participants encompass a wide spectrum of organizations, from higher education institutions and public research bodies to non-profit entities, government agencies, and private sector innovators. Successful projects can span up to twenty-four months and must be submitted through designated national focal points. By encouraging shared infrastructure development and proof-of-concept testing, this initiative seeks to build long-term technical capacity and collaborative networks throughout Southeast Asia.

26. Advancing Responsible Artificial Intelligence: Open-Source Wellbeing Benchmarks and Evaluation Grants

DONOR: Anthropic

With artificial intelligence systems becoming deeply embedded in daily life—serving as professional assistants, educational tutors, and even conversational companions—the technology sector faces a critical blind spot in measuring how these tools influence human emotional health. To address this gap, this dedicated grant program supports independent researchers who are building open-source evaluations and rigorous benchmarks to quantify model impacts on user wellbeing, particularly within sensitive scenarios like emotional distress or mental health support. The initiative emphasizes the inclusion of clinical and subject-matter experts to ensure methodologies are grounded in real-world dynamics rather than idealized lab conditions. Grantees receive essential resources, including direct financial support for research activities, technical guidance, and access to advanced AI models to test for potential harms and conversational boundaries. Ultimately, the insights generated from these independent studies are intended to help shape industry-wide safety standards, establish reliable measurement frameworks, and safeguard vulnerable users as conversational technologies continue to evolve.

27. Safeguarding Vital Waters: Mediterranean Freshwater Ecosystem Conservation and Restoration Funding

DONOR: Donors' Initiative for Mediterranean Freshwater Ecosystems

Freshwater habitats across the Mediterranean basin face unprecedented pressures, making coordinated ecological conservation and sustainable resource management more urgent than ever. This regional funding opportunity supports field-based initiatives that protect vital aquatic biodiversity, restore degraded river and wetland systems, and implement innovative water management strategies. Emphasizing a holistic philosophy, the program encourages projects that intertwine ecological health with tangible socio-economic and cultural benefits for local communities. Eligible implementers—ranging from conservation NGOs and municipalities to specialized small enterprises and scientific institutions—can propose nature-based solutions, payment systems for ecosystem services, traditional water stewardship techniques, or the removal of obsolete barriers. Projects must demonstrate a clear, on-the-ground impact within the Mediterranean region, span up to three years, and incorporate robust co-financing structures for larger financial requests. Purely academic studies or communication campaigns without concrete field execution are excluded, ensuring that every supported effort directly contributes to the ecological resilience of the basin's irreplaceable aquatic environments.

28. Accelerating Academic Breakthroughs: The Distinguished Innovator Grant for Senior Researchers

DONOR: Novo Nordisk Foundation

Translating complex academic discoveries into market-ready solutions is a pivotal step for driving sustainable development and modern healthcare advancements, yet senior researchers often lack the dedicated pathways to achieve commercial viability. This prestigious career-stage grant empowers experienced faculty members and institutional researchers in the Nordic region to advance high-impact innovations across health sciences, sustainability, and applicable quantum technologies. The initiative is split into two distinct tracks: one focusing on agricultural innovations, industrial biotechnology, greenhouse gas mitigation, and climate technologies, and another targeting pharmaceutical developments, medical devices, diagnostic tools, and preventive health solutions. Recipients utilize the support to scale promising research platforms while acting as innovation champions within their academic communities. Eligible applicants must be rooted in regional research institutions, and while commercial spin-outs are restricted during the active grant lifecycle, the program lays the crucial groundwork for future technology transfer and societal benefit. Administered through non-profit frameworks, the funding helps bridge the gap between foundational laboratory science and real-world commercial application.

29. Bridging Discovery and Proof-of-Concept: The Pioneer Innovator Grant for Nordic Academic Teams

DONOR: Novo Nordisk Foundation

Early-stage scientific concepts developed within university walls frequently hold transformative potential for human health and environmental sustainability, but testing these ideas often stalls due to a lack of flexible exploratory funding. This targeted program offers essential support to students, researchers, and faculty members across the Nordic countries to advance novel academic concepts toward critical proof-of-concept milestones. Whether focusing on sustainable agriculture, food system resilience, climate mitigation, or advanced therapeutics, medical devices, and diagnostics, the initiative encourages hands-on experimentation that bridges the gap between basic research and practical utility. Quantum technology projects with clear, credible applications in health or sustainability are similarly welcomed into the fold. The program provides one year of dedicated support for academic teams operating within universities, hospitals, or research centers, provided the intellectual property remains anchored in the public research ecosystem rather than benefiting established commercial entities. By fostering this early experimental culture, the program nurtures the next generation of mission-driven innovations designed to improve public wellbeing and advance green transitions.

30. Empowering Cinematic Artistry: Feature Film and Long Animated Film Production Realization Scheme

DONOR: Netherlands Film Fund

A vibrant and diverse cultural landscape relies on the steady creation of distinctive, high-quality cinematic works that resonate with broad audiences. Managed to foster creative excellence within the national film sector, this production realization scheme provides vital financial backing for majority-produced Dutch feature films and long animated films. The program assists independent production companies that possess a proven track record of theatrical releases, helping them navigate the complex and capital-intensive production phase of filmmaking. Funding tiers accommodate different scales of cinematic ambition, supporting projects with varying overall budgets to ensure that both modest artistic ventures and larger productions can come to life. Applicants must be officially established within qualifying European jurisdictions and maintain a continuous commitment to audiovisual exploitation, with the primary producer distinct from the project's director or screenwriter. Through this structured backing, the initiative strengthens the domestic creative economy and ensures that compelling storytelling reaches cinemas across the region and beyond.

31. Supporting Ambitious Dutch Feature and Animation Films Through Specialized Production Grants

DONOR: Netherlands Film Fund

Our editorial team is closely following this vital funding track designed to bring daring Dutch feature-length films and animated projects to life. Aimed at cultivating exceptional cinematic value and cultural resonance, the opportunity helps filmmakers reach broad domestic and international audiences, including specialized support for children's and youth content. Beyond core production support, selected projects can leverage dedicated allocations for essential international sales logistics, audio description, and subtitling to maximize accessibility across diverse viewing platforms. The initiative also backs crucial marketing and promotional expenditures during production, alongside specialized provisions for environmental management consultants to foster sustainable filmmaking practices. Eligible applicants must be independent production companies with a proven track record, operating from specific European jurisdictions for a minimum duration of two years. Furthermore, applying entities must be steered by an experienced producer who has previously overseen a theatrically released feature film in the Netherlands, ensuring high professional standards from conception to release.

32. Advancing Regenerative Whole-Farm Systems in Extremadura's Agricultural Sector

DONOR: EIT Food

Nonprofits, agricultural consultancies, and monitoring specialists should take note of this collaborative landscape-scale initiative focused on transforming regional farming practices. The program seeks a capable entity or consortium to guide corn and tomato growers toward sustainable whole-farm management through comprehensive technical assistance and agronomic training. Selected participants will oversee crucial project coordination, design robust monitoring, reporting, and verification systems, and utilize standardized indicators to track environmental and socio-economic progress. Spanning a multi-year timeline, the initiative emphasizes cross-sector collaboration among local partners, corporate collaborators, and supply chain actors to ensure lasting agricultural resilience. To qualify for consideration, applicants must be legally incorporated entities with at least three years of operating history within eligible European territories. All proposals must be meticulously prepared, submitted on schedule using the designated application framework, and articulated completely in English to meet the rigorous standards of this cooperative agricultural transition.

33. Accelerating the Market Adoption of Scalable Digital Healthcare Solutions Across Europe

DONOR: EIT Health

Healthcare innovators and technology consortia can now access targeted resources designed to expedite the commercialization of mature digital and AI-powered medical solutions. This strategic opportunity prioritizes real-world clinical validation, usability testing, business model refinement, health economic evaluations, and structured reimbursement pathway development. By bridging the gap between clinical research and widespread market integration, the program empowers small and medium-sized enterprises to successfully deploy transformative tools within European health systems. Applicants must form robust cross-border consortia comprising at least two independent legal entities that embody the Knowledge Triangle of industry, research, and education. Projects must be spearheaded by a commercial entity responsible for driving market entry, with the ultimate expectation that supported innovations achieve commercial viability and generate meaningful revenue within a year of project conclusion.

34. Alternative Financing for Unconventional and Bold Creative Filmmaking Ventures

DONOR: Netherlands Film Fund **GRANT SIZE:** \$500,000 to \$1 million

Independent filmmakers and production teams working on unconventional cinematic projects can find vital backing through this specialized alternative financing stream. The initiative is dedicated to injecting fresh creativity, unique perspectives, and diverse storytelling into the regional film landscape by championing daring low-budget feature projects that bypass traditional distribution pathways. Whether focusing on fiction, non-fiction, or hybrid narratives exceeding standard runtimes, successful teams are encouraged to redefine development and release norms. Eligible production companies must possess a solid operational history within approved European jurisdictions and be represented by producers who have previously steered independent, non-commissioned films. The pathway offers distinct financial tiers for early-stage project development and full realization, evaluating applicants primarily on artistic originality, creative urgency, and the seamless integration of form and content.

35. Empowering High-Potential European Healthcare Start-Ups Through Targeted Growth Support

DONOR: EIT Health

Emerging enterprises in the biotech, medtech, digital health, and diagnostics sectors have a distinct avenue to accelerate product development and commercial scaling. This specialized instrument addresses unmet clinical needs by helping mature start-ups refine their commercialization strategies, advance regulatory milestones, and prepare for subsequent investment rounds. To be eligible for this competitive opportunity, private small and medium-sized enterprises must maintain a designated team size and demonstrate a strong foundation of prior equity investment secured within recent years. Applicants must also prove that their innovations have attained specific innovation maturity levels suited to their respective medical fields, ranging from advanced safety studies to rigorous market validation. Selected companies receive substantial cost-sharing support to propel their groundbreaking health solutions closer to widespread clinical adoption.

36. Advanced Quantum Key Distribution Systems and Secure Communication Networks

DONOR: European Commission

Research institutions and technology developers focused on cutting-edge cybersecurity can engage with this major grant opportunity centered on next-generation quantum-secure communications. The initiative supports applied research and development to engineer sophisticated quantum key distribution systems and seamlessly integrate them into operational communication networks. Projects are expected to tackle complex technical hurdles, such as protocol scalability and the harmonization of quantum mechanisms with post-quantum cryptography, ultimately boosting performance metrics like key generation rates and operational reach. Eligible participants will validate hybrid security frameworks across demanding real-world environments, ranging from critical infrastructure protection to enterprise-grade multi-site communications. Open to established legal entities across designated European and associated regions, this action plays a pivotal role in strengthening long-term technological autonomy and advanced network security.

37. Unlocking Next-Generation Capabilities Through European Neutral-Atom Quantum Research

DONOR: European Commission

Here at Grants For Global, our editorial team is tracking a major European funding initiative dedicated to advancing neutral-atom quantum simulation and digital quantum computing platforms. This program targets complex scientific and industrial challenges by backing research and innovation actions that integrate advanced systems into high-performance computing environments and cloud platforms. Successful initiatives must tackle intricate technical benchmarks outlined in industry roadmaps, such as stable atom control during multi-qubit operations, Quantum Non-Demolition measurements, and high-fidelity universal gate operations. Participating consortia are expected to scale quantum processors, demonstrate real-world industry use cases, integrate comprehensive software stacks, and strengthen the broader European technology supply chain. Beyond core technical breakthroughs, teams must incorporate robust error correction, benchmarking tools, and vital coordination activities like user engagement and training. Ultimately, this opportunity empowers researchers and developers to surpass classical computing limits while delivering transformative breakthroughs across vital sectors like health and energy.

38. Empowering Creative Enterprises: The European Cultural and Creative Startups Call

DONOR: EIT Culture & Creativity

As part of our commitment to creative economy resilience, Grants For Global highlights an exciting opportunity for innovative ventures operating within the cultural and creative sectors and industries across Europe. This open call is specifically tailored to address the scaling and market implementation barriers faced by early-stage innovators and mature scaleups alike. By leveraging intellectual property and advanced technology, selected enterprises can secure vital financial resources to fuel business development, international expansion, team growth, and investor outreach. The initiative features distinct tracks tailored to the specific maturity level of the applicant, ranging from initial market traction validation to international growth scaling across priority domains like architecture, fashion, and audio-visual media. Alongside capital infusions, participants engage in structured financial sustainability mechanisms that connect ventures with long-term ecosystem development. Through this targeted support, creative businesses gain the crucial runway needed to enhance global competitiveness, navigate regulatory environments, and transform groundbreaking ideas into sustainable commercial realities.

39. Advancing Applied Quantum Innovation Through International Eureka Collaboration

DONOR: Eureka Network

Our research desk has reviewed a specialized international funding opportunity designed to accelerate applied quantum technologies toward higher technology readiness levels. Operating under a prominent cooperative framework, this call bridges the gap between academic research and commercial market integration by fostering multidisciplinary consortia across multiple participating countries. Eligible partnerships bring together universities, research organizations, and metrology institutions to tackle critical challenges in quantum communications, cybersecurity, metrology, and advanced sensing. To qualify, international teams must form robust cross-border collaborations that share project responsibilities and focus strictly on civilian-purpose innovations with clear commercial potential. Depending on national guidelines, participating organizations benefit from tailored national budget allocations and dedicated institutional grants to support measurement precision, validation, and industrialization efforts. By encouraging cooperative R&D across borders, the program strengthens global scientific networks and fast-tracks the deployment of next-generation quantum solutions into the commercial marketplace.

40. Bridging Borders: Collaborative G7-Nordic Quantum Technologies Research Initiative

DONOR: NordForsk

Grants For Global is pleased to feature a collaborative research initiative that unites Nordic research institutions and Canadian partners in advancing cutting-edge quantum science. This program encourages multidisciplinary academic cooperation across a broad spectrum of quantum fields, ranging from post-quantum cryptography and quantum algorithms to materials, sensing, and communications. To be eligible, applicant consortia must bring together researchers from designated Nordic countries alongside qualifying Canadian teams, establishing a robust framework for international knowledge exchange. The initiative supports multi-year collaborative projects that not only drive scientific discovery but also create valuable training opportunities for emerging researchers and students. Each participating national funding agency oversees its respective researchers under established domestic guidelines, while central management coordinates the overarching consortium goals. Through rigorous merit assessments and structured reporting, selected projects deliver high-impact advancements that significantly strengthen international scientific leadership in quantum engineering.

41. Investigating Artificial Intelligence Integration in Modern Nordic Workplaces

DONOR: Nordic Council of Ministers

Our editorial team is closely following an insightful Nordic funding opportunity dedicated to exploring the multifaceted impacts of artificial intelligence on contemporary working life. This initiative invites research institutions to lead comprehensive, multi-year projects that examine how AI is integrated and governed across workplaces. Projects must adopt an integrated approach that simultaneously evaluates occupational health and safety, broader labor market dynamics, and relevant legal frameworks to ensure responsible technology adoption. The work typically begins with mapping existing research, regulatory developments, and policy frameworks across international landscapes to establish a strong foundational baseline. Furthermore, successful teams provide actionable recommendations and structural guidance to shape future policy developments and maximize Nordic added value. By addressing decision-making processes, employee involvement, and work environment considerations, the program empowers policymakers and stakeholders to navigate the digital transformation of labor markets safely and equitably.

42. Leveraging Space-Enabled Solutions to Revolutionize Global Road and Traffic Safety

DONOR: The European Space Agency

Here at Grants For Global, we are spotlighting an impactful funding opportunity focused on harnessing space-based technologies to address pressing global road and traffic safety challenges. With traffic incidents causing significant loss of life worldwide, the rapid pace of urbanization and the rise of connected mobility demand innovative, scalable safety interventions. This program supports companies in developing advanced space-enabled services and applications that improve incident detection, traffic management, infrastructure maintenance, and predictive safety planning. Solutions may leverage cutting-edge tools like IoT sensors, artificial intelligence, and cloud computing to optimize traffic flows and better protect vulnerable or non-motorized road users. By transforming critical data collection and supporting safer vehicle ecosystems, the initiative helps transport authorities and industries adapt to shifting mobility patterns. Eligible enterprises receive dedicated financial support to develop, test, and deploy space-derived products that actively save lives and build resilient transportation networks.

43. Advancing Sustainable Solid Biofuels and High-Efficiency Regional CHP Systems

DONOR: European Commission (EC)

Our editorial team is tracking a prominent funding opportunity designed to propel regional bioenergy value chains and high-efficiency combined heat and power systems toward full operational maturity. This initiative prioritizes projects that harness upgraded biogenic residues and wastes to generate reliable, low-emission power and heat while safeguarding soil carbon, water balances, and local biodiversity. Successful applicants will deploy continuous, cost-effective technologies within a specific capacity range, pairing technical excellence with rigorous life cycle assessments and adherence to regulatory directives. Beyond pure energy generation, the program places a strong emphasis on socio-economic resilience, local job creation, and the integration of social sciences and humanities expertise. Grantees must also embed gender-sensitive and intersectional perspectives, forge collaborative networks with bioenergy clusters, and formulate robust strategies for commercial scalability. Furthermore, the initiative welcomes opportunities to support reconstruction efforts and foster cross-border cooperation within industrial ecosystems, making it a vital catalyst for circular, low-carbon regional development across participating territories.

44. Deep Geothermal Resource Assessment and Advanced Exploration Innovations

DONOR: European Commission (EC)

Civil society organizations and research consortia focusing on renewable subsurface energy will find compelling support in this specialized program targeting deep sedimentary and basement reservoirs. The initiative encourages the creation of advanced exploration methods, predictive conceptual models, and innovative technological solutions capable of accurately assessing geothermal resources located at considerable depths. By addressing common data limitations and applying rigorous decision-making and risk-analysis frameworks, participating teams will work to mitigate technical uncertainties and foster safer operational outcomes. A cornerstone of the program is its commitment to early, continuous, and inclusive community engagement, ensuring that local populations are actively consulted on environmental variables such as water balance, seismic activity, land use, and ecosystem protection. By bridging cutting-edge geosciences with transparent socio-environmental stewardship, this funding opportunity empowers practitioners to unlock baseload renewable potential while building long-term public trust and regulatory acceptance for subsurface energy projects.

45. Secure Energy Data Sharing and Open-Source AI Foundation Models

DONOR: European Commission (EC)

To accelerate the digital transformation of power systems, our team highlights this strategic call focused on developing secure data-sharing frameworks and advanced artificial intelligence foundation models for the energy sector. Participating consortia will engineer innovative methodologies for aggregating, governing, and exchanging extensive datasets while strictly upholding privacy, ethics, and security protocols. The resulting AI models will be rigorously tested through laboratory demonstrations and real-world pilots to optimize grid observability, demand-side flexibility, energy storage, and renewable integration. Grantees are encouraged to leverage open-source principles, collaborate closely with diverse industry stakeholders—such as grid operators, utilities, and technology startups—and utilize specialized high-performance computing resources where applicable. By establishing scalable data governance strategies and transparent operational architectures, this funding stream equips the energy community with the computational tools needed to navigate complex grid management and drive the broader transition toward a cleaner, highly digitized power infrastructure.

46. Innovative Photovoltaic System Designs for Agrivoltaics and Offshore Energy

DONOR: European Commission (EC)

As Europe accelerates its renewable energy transition, this dedicated partnership funding opportunity invites innovators to revolutionize photovoltaic deployment through advanced agrivoltaic and offshore or nearshore system designs. The program seeks to harmonize land and sea use by dual-purposing solar installations for agricultural harvesting or marine operations while actively protecting biodiversity, conserving water, and minimizing ecological footprints. Successful applicants will focus on modular, cost-effective engineering solutions that reduce capital expenses, increase overall energy output, and foster inclusive consumer participation within local energy communities. Proposals must strategically address either agricultural integration or coastal/marine PV applications, ensuring that low-income and energy-poor households can share in the resulting socioeconomic benefits. Through integrated policy approaches and novel business models, this initiative strengthens the broader renewable value chain and paves the way for resilient, multifunctional solar infrastructure.

47. Transnational Pre-Commercial Procurement for Renewable Fuel Technologies

DONOR: European Commission (EC)

Our editorial desk notes a major procurement-focused funding stream aimed at de-risking and accelerating the commercialization of essential renewable fuel technologies across participating territories. This initiative utilizes pre-commercial procurement mechanisms to bring innovative research and development services up to high technology readiness levels through collaborative, cross-border public and private partnerships. Public and private procurers—including port authorities, transport bodies, and regional agencies—will jointly contract specialized technology providers to build robust, cost-effective industrial value chains. By aligning research priorities with practical market deployment, the program reduces investment barriers, enhances security of supply, and provides regulatory bodies with empirical evidence to streamline permitting procedures. Consortia are further encouraged to leverage complementary financial instruments and engage diverse stakeholders to maximize industrial impact, foster green job creation, and drive long-term greenhouse gas reductions within the fuel supply ecosystem.

48. Empowering Grassroots Organizations to Combat Gender-Based Violence and Violence Against Children

DONOR: European Commission (EC)

Grassroots civil society organizations working tirelessly on the front lines of social justice will find critical backing in this regranting and capacity-building initiative dedicated to eradicating gender-based violence and protecting children. The program channels vital financial resources through experienced intermediary organizations to reach smaller, community-level groups operating in remote or underserved areas. Supported actions encompass trauma-informed victim support, the prevention of domestic and sexual violence, and comprehensive responses to emerging threats such as technology-facilitated and cyber-based abuse. Intermediaries are required to implement robust capacity-building programs, establish rigorous monitoring and evaluation frameworks, and foster multidisciplinary cooperation among schools, healthcare providers, law enforcement, and child protection agencies. By prioritizing intersectional, gender-sensitive, and child-centred approaches, this funding opportunity strengthens the resilience and long-term structural impact of independent civil society networks striving for safe, inclusive communities.

49. Advancing Integrated Child Protection Systems Through Cross-Sector Collaboration

DONOR: European Commission (EC)

Our editorial team highlights this comprehensive funding opportunity designed to revolutionize how communities and institutions protect children from all forms of violence and exploitation. By fostering deep partnerships across public authorities, judicial bodies, law enforcement, healthcare providers, and civil society, the initiative supports systemic improvements in prevention, early reporting, and child-centered response mechanisms. Nonprofits and public bodies can leverage this support to build multidisciplinary support hubs, implement school-based anti-bullying initiatives, and establish trauma-informed care models for vulnerable populations such as children with disabilities or those in alternative care. Successful projects will bridge communication gaps between sectors to ensure seamless referral pathways and robust accountability frameworks. Eligible entities across participating European nations are invited to spearhead collaborative actions that create lasting, rights-based safeguards for children.

50. Establishing Comprehensive Protection and Support Services for Survivors of Gender-Based Violence

DONOR: European Commission (EC)

We are closely tracking this vital call focused on enhancing safety networks, specialist support centers, and specialized one-stop services for individuals affected by gender-based violence. The program emphasizes multidisciplinary approaches that address the complex, intersecting needs of survivors—especially those facing heightened vulnerabilities due to marginalized backgrounds, disabilities, or socioeconomic challenges. Grantees will work on developing innovative investigative tools, strengthening early risk assessments, and creating immediate protection instruments to prevent domestic violence and tragic outcomes like femicides. By equipping relevant authorities and support providers with advanced operational guidelines and training, the initiative aims to ensure survivors receive dignified, timely, and coordinated assistance. This opportunity offers a crucial pathway for organizations dedicated to upholding human rights and transforming victim support infrastructure.

51. Empowering Public Authorities to Implement the Istanbul Convention and Violence Against Women Directive

DONOR: European Commission (EC)

Designed specifically for public sector bodies and government entities, this funding opportunity focuses on institutional capacity building to drive structural solutions against gender-based and domestic violence. The program targets the critical need for specialized professional training among judges, law enforcement personnel, court staff, healthcare workers, and social services professionals. Through this initiative, participating agencies can develop trauma-sensitive, gender-sensitive, and child-sensitive protocols that dramatically improve how justice and support systems identify and respond to abuse. By strengthening statutory procedures and fulfilling key international and regional legislative standards, public leaders can build resilient internal frameworks that better protect victims and hold perpetrators accountable. Our team views this as a cornerstone opportunity for public institutions seeking to elevate their operational readiness in victim advocacy.

52. Proactive Prevention Strategies to Combat Gender-Based and Online Violence

DONOR: European Commission (EC)

Our editorial desk features this forward-thinking call dedicated to stopping gender-based violence before it starts by dismantling harmful social norms, addressing toxic behaviors, and promoting robust preventive measures both online and offline. The initiative encourages innovative campaigns that champion consent in sexual relationships, engage men and boys as active allies, and enhance digital literacy to combat cyber violence and intimate partner harassment. Organizations can utilize these resources to establish perpetrator intervention programs, develop tools for reporting and removing harmful digital content, and challenge stereotypical portrayals within media and creative industries. Projects may operate at national or transnational levels, inviting specialized coalitions to tackle the root cultural and systemic drivers of violence. This program stands out as an essential catalyst for long-term societal transformation and victim-centered safety.

53. Catalysing Biotechnology Innovations and Interventions for Healthy Longevity

DONOR: European Commission (EC)

Our research team is spotlighting this major challenge-driven initiative aimed at advancing clinically validated, biotechnology-based solutions that target the foundational molecular mechanisms of ageing. The program invites visionary teams to deliver proof-of-concept interventions capable of preventing, delaying, or reversing age-related health conditions in vertebrate model systems, alongside the creation of advanced biomarker tools and New Approach Methodologies. By addressing ageing as a shared root factor for multiple chronic diseases, successful projects will help mitigate the mounting societal and healthcare pressures associated with demographic shifts. Applicants are expected to incorporate rigorous scientific validation, consider regulatory pathways, and account for ethical and economic viability from the outset. This represents a monumental avenue for researchers and innovators dedicated to extending healthspan and transforming preventative medicine.

54. Strengthening Situational Awareness and Security for Submarine Cable Infrastructure

DONOR: European Commission (EC)

This specialized security initiative focuses on mapping, accessing, and integrating critical situational data to safeguard vital submarine cable networks against emerging threats. Because relevant sensor feeds and maritime or satellite surveillance records are often fragmented across various private operators and sea basins, the program supports pilot demonstrations and proof-of-concept activities to test data fusion and interoperability. Participating entities will evaluate private-sector data access models, assess the feasibility of Regional Cable Hubs, and analyze the practical limitations of generating unified threat awareness. Designed for agile implementation over a concise project lifecycle, the opportunity fosters essential collaboration between public security bodies and private maritime actors. Our team recognizes this as a critical stepping stone for protecting essential digital and physical communication lifelines.

55. Boosting Transport Resilience with Advanced AI and Digital Tech

DONOR: European Commission (EC)

Our editorial team is highlighting a major funding initiative designed to help passenger transport systems withstand unexpected disruptions through cutting-edge digital innovations and artificial intelligence. NGOs, research institutions, and transport stakeholders are invited to develop real-time data analytics, predictive maintenance models, and emergency simulation tools that safeguard urban, suburban, and long-distance corridors. Successful initiatives will implement generative and discriminative AI to anticipate infrastructure vulnerabilities, minimize passenger delays, and reinforce public trust in mobility networks. Selected consortia must test and validate their solutions across multi-modal pilot sites in multiple Member States, ensuring broad operational applicability. Participating entities must complete official registrations and obtain a Participant Identification Code prior to submitting their comprehensive proposals.

56. Scaling Agrobiodiversity for European Food Security and Farm Resilience

DONOR: European Commission (EC)

This strategic funding opportunity focuses on expanding agricultural biodiversity to fortify European food security, adapt to changing climatic pressures, and secure sustainable rural livelihoods. Nonprofits, agricultural researchers, and industry networks can apply for support to quantify the socio-environmental benefits of diversified farming and scale successful practices across the agricultural value chain. The programme emphasizes the creation of practical decision-support tools, innovative nature-based credits, and robust commercialization pathways for diverse crop varieties. Projects are expected to align closely with key regional sustainability frameworks while assisting farmers, land managers, and agribusinesses in mitigating production risks. Any eligible legal entity, including international organizations, may put forward collaborative proposals aimed at transforming European agriculture.

57. Protecting Mangrove Ecosystems and Advancing Blue Carbon Initiatives

DONOR: Blue Action Fund

Conservation organizations working across South and Southeast Asia have a vital opportunity to secure support for comprehensive mangrove protection, ecological restoration, and blue carbon credit development. The initiative prioritizes expanding protected areas and implementing effective conservation measures in key nations to bolster biodiversity, mitigate climate change, and uplift coastal communities. Eligible nonprofit consortia must integrate robust carbon accounting, rigorous monitoring systems, and sustainable livelihood strategies into their project frameworks. Applicants are expected to secure significant matching funds and can design multi-year interventions that directly contribute to global biodiversity targets. The application process follows a competitive two-stage procedure, starting with initial concept notes before advancing to detailed full proposals.

58. Empowering Vulnerable Youth for the Green Transition

DONOR: Villum Foundation **GRANT SIZE:** \$500,000 to \$1 million

Civil society organizations and educational institutions across Central Europe can now access dedicated resources to support at-risk and marginalized youth navigating the socio-economic shifts of sustainability. The programme targets children and young people from refugee, immigrant, or disadvantaged backgrounds, ensuring they are not left behind in the movement toward a green economy. Funded activities encompass engaging after-school green initiatives, innovative teaching methodologies for transversal skills, digital literacy training, and professional development opportunities for educators. Grantees receive substantial multi-year support disbursed in advance installments, covering all relevant operational expenses including necessary facility renovations. Eligible entities must submit their applications in English and demonstrate a strong capacity for cross-border collaboration.

59. Cross-Border Small-Scale Projects for Circular Economy and Sustainable Tourism

DONOR: Interreg

Regional authorities, public bodies, and non-profit organizations situated within the Greece-Italy cooperation zone are encouraged to apply for targeted small-scale project grants. This opportunity promotes collaborative initiatives that advance resource-efficient circular economies and enhance the role of culture in sustainable regional development and social innovation. Partnerships must align their proposed activities with specific programme objectives, demonstrating a clear cross-border impact and adherence to established intervention fields. Successful beneficiaries will receive partial financial backing through European and national funds, requiring a matched local co-financing contribution. All required application materials and formal documentation must be submitted digitally via the dedicated Management Information System.

60. Strengthening Institutional Capacity Through Greece-Italy Cooperation

DONOR: Interreg

Public authorities, territorial cooperation groups, and non-profit entities in the Greece-Italy border region can tap into specialized funding designed to reinforce institutional governance and cross-border partnerships. The call supports collaborative ventures that empower bodies responsible for managing specific territories to jointly tackle shared administrative and strategic challenges. Participating organizations will work to improve macro-regional strategies, enhance territorial planning processes, and foster cohesive regional growth across the designated cooperation area. Projects will be evaluated based on their strategic alignment with programme indicators, intervention logics, and overall regional impact. Beneficiaries are responsible for securing a portion of the total project costs through local co-financing while managing their submissions through the official portal.

61. Institutional Strengthening Initiative for Open Data and Privacy Frameworks in Albania

DONOR: European Commission (EC)

Our editorial team is tracking an important European Commission funding opportunity designed to bolster the administrative capabilities of Albania's data protection and right to information authority. This initiative focuses specifically on ensuring that open data policies and personal data protection regulations are rigorously implemented and monitored across the public sector. Successful implementers will work to integrate robust privacy safeguards into modern digital and artificial intelligence public initiatives, keeping them strictly aligned with European standards and best practices. Eligible organizations are restricted to public administrations and officially mandated bodies from European Union Member States, which must coordinate their submissions through their designated National Contact Points following standard twinning procedures. Selected projects will have up to a year and a half to execute their capacity-building objectives and achieve lasting institutional impact. We encourage eligible public bodies seeking to foster transparent, digitally secure governance frameworks in the region to review the official RFA details well ahead of the autumn deadline.

62. National Health Research Enterprise Support for Priority Infectious Diseases in South Africa

DONOR: South African Medical Research Council

This notable national health research enterprise call has been established to counteract declining international philanthropic flows and safeguard South Africa's vital scientific ecosystem. Backed by a coalition of domestic and international partners, the program invites domestic research institutions to spearhead innovative investigations tackling tuberculosis, HIV, broader infectious threats, and urgent pandemic preparedness. Investigators are encouraged to produce actionable knowledge, advanced tools, scalable interventions, and rigorous implementation models that directly align with national health objectives. Eligible lead applicants include public universities, statutory research entities, science councils, and dedicated research institutions situated within the country, provided the principal investigator holds citizenship or permanent residency. Private companies, non-research non-profits, and international entities may participate solely as collaborative partners rather than primary applicants. Successful projects can secure multi-year support spanning a three-year implementation window, with tiered budgeting structures designed to maximize the breadth of funded initiatives. NGOs and academic teams focused on public health transformation should carefully evaluate these guidelines to strengthen local research capacity and health outcomes.

63. Targeted Research Grants for Women, Maternal, and Child Health Across South Africa

DONOR: South African Medical Research Council

Our research desk highlights a dedicated funding opportunity aimed at filling critical knowledge gaps in women's, maternal, neonatal, and child health throughout South Africa. Administered by the national medical research council, the program seeks evidence-based innovations, epidemiological insights, and improved clinical interventions tailored to local primary care and rural healthcare delivery. Priority topics encompass a wide spectrum of urgent needs, ranging from menstrual and reproductive conditions to complex multimorbidities and neonatal prevention strategies. Principal investigators must be South African citizens or permanent residents affiliated with recognized public universities, science councils, or specialized research institutions serving as lead applicants. While external civil society groups and international bodies cannot serve as primary applicants, they are welcome to join successful consortia as collaborative partners. Awards provide structured multi-year funding over a three-year operational cycle, with an emphasis on cost-effective, scalable solutions that promise profound public health impacts. This initiative represents a vital resource for national scientific teams dedicated to advancing equitable healthcare access for mothers and children.

64. Civil Society Thematic Action Grants for Green Transition and Women's Empowerment in Indonesia

DONOR: European Commission (EC) **GRANT SIZE:** More than \$1 million

The European Commission has launched a comprehensive civil society call in Indonesia to empower independent organizations driving sustainable development, human rights, and democratic engagement. Operating under broader international cooperation frameworks, this funding mechanism is split into two distinct focal areas: advancing an inclusive and just green transition across natural resource sectors, and eliminating all forms of violence against women and girls. Under the green transition track, CSOs will tackle challenges in sustainable energy, forestry, circular economy, and agriculture, paying close attention to vulnerable communities. The gender equality track focuses on strengthening survivor-centric services, prevention mechanisms, and women's active participation in public and economic life. Eligible non-profit civil society groups can apply for substantial multi-year grants covering a significant share of total eligible project costs, with implementation periods spanning three to four years. Applicants must navigate the EU's online portal systems and register appropriately to participate, with mandatory local co-applicant requirements for international leads. Our team recommends that Indonesian advocacy groups and community actors examine these thematic lots to scale their impact on local sustainability and rights.

65. Technical Assistance Program for Standardizing Loss and Damage Assessments in Kyrgyzstan

DONOR: Santiago Network Secretariat **GRANT SIZE:** \$500,000 to \$1 million

Our editorial staff is closely following a specialized technical assistance opportunity from the Santiago Network Secretariat aimed at addressing climate vulnerabilities in the Kyrgyz Republic. Because the country faces mounting climate hazards and glacier retreat, it urgently requires a unified, scientifically sound mechanism to measure both economic and non-economic loss and damage. This initiative helps national stakeholders establish standardized assessment methodologies, embed those protocols into existing digital infrastructure, and train local institutions for long-term operational resilience. Eligible implementers encompass a diverse range of actors, including international and national NGOs, academic research bodies, commercial firms, UN entities, and intergovernmental organizations with demonstrated Central Asian experience. Prospective applicants must hold membership in the Santiago Network or submit a formal expression of interest prior to closing out their proposal packages. The intervention offers robust financial backing, with standard independent auditing required for higher-tier awards, while encouraging cost-effective co-financing models. This call offers a prime pathway for technical experts to enhance climate finance access and decision-making capabilities in vulnerable mountainous regions.

66. Fritt Ord Foundation Open Call for Independent Norwegian Journalism Projects

DONOR: Fritt Ord Foundation **GRANT SIZE:** \$500,000 to \$1 million

Our team has reviewed the latest open funding cycle from the Fritt Ord Foundation, which channels substantial annual investments into high-impact journalism tailored for Norwegian audiences. Designed with maximum flexibility, the call imposes no strict thematic boundaries, allowing editorial teams, independent journalists, and media outlets to pursue investigative or public-debate topics of their choosing. Projects must target the general public across diverse publishing platforms and multimedia formats, with a strong emphasis on reaching broad segments of society. While editorial offices and individual writers are both welcome to apply, granted funds must ultimately be disbursed to named practitioners performing the core reporting work. Collaborative reporting efforts involving multiple journalistic communities or formal publishing agreements for freelancers receive particularly enthusiastic consideration. The foundation primarily underwrites direct expenses tied to the creation and dissemination of journalistic content rather than general operational overhead or internal corporate training. Media professionals seeking to enrich public discourse in Norway should review the submission criteria ahead of the autumn deadline.

67. Vienna Business Hub Expansion and Relocation Support Initiative

DONOR: Vienna Business Agency **GRANT SIZE:** \$500,000 to \$1 million

Our editorial team is highlighting a valuable Vienna-based funding opportunity aimed at bolstering the local economy by encouraging enterprises to establish, expand, or relocate their operations and production sites within the city. This initiative supports a wide variety of eligible corporate undertakings, ranging from brand-new structural construction and conversion projects to property purchases, thorough renovations, and necessary architectural or strategic planning services. The program specifically welcomes small, medium-sized, and large enterprises that currently maintain or plan to establish a physical business location in the region, as well as entrepreneurial founders and external companies looking to set up their primary headquarters locally. Successful applicants will embark on structured projects spanning up to four years, meeting specific capital thresholds tailored to whether they operate as small businesses or larger commercial entities. By targeting both seasoned market players and incoming founders, this economic development measure works to continuously enrich Vienna's commercial landscape, foster innovation, and generate robust employment opportunities throughout the urban business community.

68. UK Atmospheric Science and Aerial Autonomy Technology Grant Initiative

DONOR: UK Research and Innovation (UKRI)

Our research team has identified a specialised UK funding call designed to bolster the nation's environmental observing capabilities by advancing cutting-edge autonomous technology, sensing instrumentation, and measurement systems. This initiative draws momentum from prior aerial capability frameworks to help researchers successfully develop, integrate, deploy, and demonstrate innovative autonomous solutions tailored for atmospheric science and environmental applications. Eligible teams can direct their efforts either toward sophisticated atmospheric sensing and measurement instrumentation or toward the practical deployment of autonomous aerial systems for broad ecological monitoring. Approximately half of the available resources are dedicated to supporting each of these two distinct technological pillars, ensuring a balanced approach to scientific discovery and technical deployment. Eligible applicants must be securely positioned within UK research organisations that qualify for specific national council funding, though international collaborators are warmly welcomed to participate as vital project partners. Participating groups must present robust applications featuring guaranteed access to necessary research facilities, reliable operational resources, and well-structured plans for rapid mobilisation and field delivery.

69. First Nations Culturally Led Disaster Recovery Support Program for NSW

DONOR: NSW Reconstruction Authority

Our editorial staff is pleased to feature a targeted recovery and resilience initiative designed to address the specific needs of First Nations communities across designated local government areas in New South Wales following declared natural disasters. Administered as part of a broader regional recovery package, this program empowers Indigenous communities through culturally appropriate, community-led initiatives that foster long-term wellbeing, social resilience, and structured healing. The funding prioritizes the creation and dissemination of culturally accessible recovery information, while actively strengthening vital relationships between local cultural knowledge holders, respected Elders, community representatives, and official disaster management decision-makers. Supported activities include hiring dedicated community coordinators, hosting engaging workshops, building local capacity, and implementing comprehensive frameworks such as Connecting with Country guidelines to ensure culturally safe support networks. Eligibility is strictly reserved for Aboriginal Community Controlled Organisations and not-for-profit Aboriginal Engagement Organisations that are authentically operated by First Nations people, properly incorporated, and actively servicing eligible regional councils. Applicants must also maintain valid operational compliance, including holding a current business registration and appropriate organizational insurance.

70. Ontario Community Sport and Recreation Facility Repair and Rehabilitation Fund

DONOR: Ministry of Sport

Our editorial team is drawing attention to an Ontario capital funding initiative created to revitalize, repair, and extend the functional lifespan of existing public sport and recreation infrastructure across the province. Delivered through the regional sports ministry, this program focuses on elevating local programming capacity, upgrading health and safety standards, and improving overall accessibility for community members of all ages. Eligible capital projects cover a wide spectrum of physical improvements, from crucial facility structural repairs and modern HVAC system installations to athletic field resurfacing, accessible washroom additions, and outdated playground equipment replacements. The grant structure is designed to accommodate various organisational types with tailored cost-sharing frameworks, ensuring robust public investment alongside local community contributions. Eligible participants include local municipalities, service boards, qualified non-profit organisations with an established operational history in the province, and Indigenous communities that either own or hold a long-term leasehold interest in the public facility. Successful proponents are required to complete their approved capital improvements within a structured multi-year implementation window, following a milestone-based disbursement schedule.

71. Scottish Community Energy Generation and Renewable Infrastructure Growth Fund

DONOR: Scottish Government

Our research analysts have spotlighted a Scottish Government-backed funding opportunity designed to help local communities successfully transition renewable energy concepts from initial brainstorming phases all the way to full operational delivery. Operating under a broader community and renewable energy scheme, this fund specifically targets non-profit distributing charities and incorporated entities that have identified viable opportunities to generate, store, or optimize renewable electricity locally. Financial support is structured across distinct project stages, offering comprehensive feasibility assistance, multi-year development backing, and substantial construction grants alongside supportive loan options for larger installations. Eligible initiatives focus on established green technologies such as solar photovoltaics, onshore wind generation, hydropower, and advanced battery storage systems, while strictly excluding basic technology research and development activities. Applicants must demonstrate a firm commitment to generating significant, lasting community benefit, clearly outlining how future project income will be reinvested to drive long-term local impact. While most generation projects are expected to meet a specific minimum capacity threshold, the program remains flexible enough to consider smaller, highly impactful community proposals under appropriate circumstances.

72. Ontario Major Sport and Recreation Infrastructure New Builds Initiative

DONOR: Ministry of Sport

Our editorial group is featuring a major capital investment stream inviting eligible Ontario stakeholders to develop signature new sport and recreation infrastructure projects that address urgent community needs and drive regional economic growth. This program is specifically tailored for large-scale development efforts, such as replacing obsolete facilities, expanding existing municipal structures, or creating entirely unique recreational assets that currently do not exist within the region. Priority is given to ambitious projects capable of attracting substantial external investments, boosting local business activity, and successfully hosting major sporting events to elevate regional tourism and civic engagement. The funding model offers substantial capital support with tailored cost-sharing proportions depending on whether the applicant represents an Indigenous community, a local municipality, a non-profit entity, or a commercial organization. Eligible participants must operate spaces dedicated to sport or recreation programming and must successfully finalize their comprehensive infrastructure projects within a strict multi-year completion timeline. Submissions require thorough documentation, including official corporate verification, financial audits, property ownership or lease proofs, and detailed project design plans to demonstrate readiness for execution.

73. Conserving Critical Wildlife Habitats Through Permanent Land Acquisition

DONOR: Fish and Wildlife Service

Our editorial team is tracking a targeted federal funding initiative designed to help public agencies permanently protect and conserve valuable ecosystems for vulnerable wildlife. Administered through established environmental protection channels in the United States, this opportunity assists state and territorial bodies in acquiring real property either through fee simple purchase or long-term conservation easements. The primary goal is to safeguard natural environments that support federally listed, candidate, and at-risk species operating under approved conservation plans. Eligible applicants must maintain active cooperative agreements with the federal wildlife authority and can partner with local counties or conservation organizations to execute land protection strategies. Successful projects are expected to drive voluntary conservation outcomes that complement regulatory measures without substituting mandatory mitigation obligations. Agencies must incorporate appropriate cost-sharing commitments into their proposals, though certain territories are exempt from matching requirements. This program represents a vital mechanism for long-term ecological stewardship, offering substantial resources to secure permanent sanctuaries for endangered and at-risk fauna across participating regions.

74. Advancing Sustainable AI Through High-Risk Research Innovations

DONOR: UK Research and Innovation

As artificial intelligence technologies expand rapidly, our research desk highlights an important funding stream aimed at addressing the associated environmental and resource challenges. Delivered through the United Kingdom's leading innovation frameworks, this open call invites academic and technical teams to pursue speculative, high-risk research designed to make future digital systems sustainable by design. Investigators are encouraged to explore groundbreaking improvements across hardware, algorithms, software, and overall system design to maximize energy efficiency, operational reliability, and environmental resilience. The initiative seeks to position the nation at the forefront of green technology development by fostering radical innovations that generate foundational insights and new commercial pathways. Eligible participants include research groups and individuals based at recognized institutions, with strong encouragement for research software engineers and technical professionals to step into leadership roles. Projects selected for support receive substantial backing for multi-year investigations starting in early 2027. This program offers a pivotal opportunity for forward-thinking researchers dedicated to mitigating the ecological footprint of next-generation computing technologies.

75. Strengthening Water Utility Workflows Through Specialized Training Initiatives

DONOR: Environmental Protection Agency

Our editorial staff is closely monitoring a dedicated federal grant program focused on tackling critical workforce shortages within the nation's drinking water and wastewater utility sectors. Established to address an aging workforce and the escalating demand for specialized technical expertise, this opportunity supports comprehensive education, training, and industry collaboration initiatives. The program places special emphasis on empowering rural, small, and tribal communities by building a robust and sustainable pipeline of skilled professionals. Eligible organizations can utilize support to implement targeted internships, apprenticeships, post-secondary bridge programs, and educational outreach spanning elementary schools up to higher education institutions. Proposals must showcase innovative approaches to career development while actively expanding access for underrepresented and limited-resource populations. Public works departments, higher education institutions, and nonprofit entities are welcome to apply for multi-year awards designed to cover diverse geographic areas and measurable public health outcomes. By investing in these essential utility networks, the initiative helps secure safe water infrastructure and environmental protection for communities nationwide.

76. Expanding Comprehensive Support Networks for Human Trafficking Survivors

DONOR: Office for Victims of Crime

Our team is reviewing an impactful federal funding opportunity dedicated to building, expanding, and enhancing specialized victim service programs. Managed by specialized federal offices focused on crime victims, this initiative seeks to strengthen the capacity of community organizations and public agencies to deliver holistic, survivor-centered assistance. Recipients use these resources to identify individuals affected by human trafficking, provide essential recovery support, and advocate effectively on their behalf. Funded programs are expected to foster strong coordination among local service providers, justice partners, and community stakeholders to ensure survivors receive comprehensive care. A wide variety of entities are eligible to apply, including tribal organizations, local and state governments, public housing authorities, and tax-exempt nonprofit organizations. This funding stream empowers organizations to improve their operational readiness, streamline multi-agency responses, and offer trauma-informed pathways toward healing and independence for vulnerable populations. It serves as an essential resource for strengthening the social infrastructure required to protect and uplift trafficking survivors.

77. Driving Knowledge-Based SME Innovation in the Danish Market

DONOR: Innovation Fund Denmark

Our editorial desk has identified a prominent funding instrument tailored for small and medium-sized enterprises and startups seeking to execute ambitious, knowledge-led development projects. Administered by national innovation bodies in Denmark, this flagship program aims to foster high-risk, challenge-driven initiatives that boost corporate competitiveness and generate broader societal benefits. To qualify, registered businesses must meet specific financial thresholds regarding recent capital raising or annual gross profits while adhering to standard regional definitions for smaller commercial enterprises. Support is available for activities that yield novel solutions, covering essential operational expenses such as specialized staff salaries, external knowledge suppliers, equipment, and developmental materials. Selected enterprises receive substantial co-financing support for multi-month developmental timelines, enabling them to transition innovative concepts into viable commercial products. Companies undergoing financial distress or majority public ownership are excluded, making this an exclusive catalyst for dynamic, market-driven businesses committed to technological and economic advancement.

78. Empowering Agricultural Producers Through Comprehensive Risk Management Education

DONOR: National Institute of Food and Agriculture

Our research team highlights a competitive grants program designed to enhance risk management education and outreach for agricultural producers across the agricultural sector. Administered through national agricultural science and extension networks, this initiative helps farming communities navigate complex economic, financial, and operational uncertainties. Supported educational activities encompass a wide spectrum of strategies, including futures and options, crop insurance, financial benchmarking, business planning, marketing tactics, and farm succession planning. Special priority is given to bolstering farm viability, strengthening business resilience, and guiding producers through practical risk reduction techniques. A diverse array of public and private entities—including land-grant institutions, extension services, universities, and nonprofit organizations—are eligible to apply and may collaborate with external subcontractors to deliver impactful programming. By equipping producers with advanced financial tools and strategic planning insights, this program plays a crucial role in securing the long-term economic stability of agricultural enterprises.

79. Empowering Families of Young Children with Developmental Needs in Western Australia

DONOR: Department of Communities

The Grants For Global editorial team highlights this important regional initiative aimed at filling critical support gaps for young children and their families. Operating across Western Australia, the program seeks to deliver early, preventive, and community-based interventions specifically tailored for children aged zero to eight years who experience developmental concerns or autism. Eligible civil society groups and local authorities can secure substantial project support to build essential social connections, knowledge, and practical capabilities among parents and carers. By targeting families before formal specialist intervention becomes necessary, the initiative ensures timely assistance that aligns with recognized best-practice frameworks for early childhood development. Interested organizations may propose initiatives spanning general or autism-specific support streams, with projects required to run over a multi-year timeframe. Eligible applicants include incorporated not-for-profit entities and local government bodies, while for-profit groups and individuals fall outside the scope. Through this targeted funding, community leaders have a vital opportunity to strengthen grassroots family support systems and improve long-term outcomes across the region.

80. Advancing Clean Energy Solutions to Protect Forests and Reduce Wood Fuel Dependency in Central Africa

DONOR: United Nations Capital Development Fund

Our research desk draws attention to a multi-year regional initiative designed to tackle deforestation by transforming energy consumption and reducing reliance on traditional wood fuels. Focusing on the Democratic Republic of Congo, this collaborative program mobilizes vital capital for sustainable energy interventions, financial intermediaries, and forward-thinking enterprises. The initiative prioritizes three core operational pillars: establishing robust liquefied petroleum gas infrastructure, deploying solar and micro-hydropower solutions to electrify agro-forestry enterprises, and supporting local assembly plants for advanced cookstoves alongside sustainable charcoal production. Furthermore, the program empowers local financial institutions to expand lending access for small and medium-sized enterprises, corporations, and households adopting clean technologies. Eligible participants—including commercial ventures, energy enterprises, and financial intermediaries—receive flexible financial support tailored to their specific growth stage and projected environmental impact. Selected proponents undergo a rigorous due diligence process led by administering agencies, followed by structured fund deployment and ongoing oversight to guarantee lasting ecological and community benefits.

81. Promoting Inclusion, Rights, and Protection for Children with Disabilities in Egypt

DONOR: European Commission (EC)

Our editorial team brings forward a significant European Commission funding opportunity dedicated to safeguarding the rights and dignity of children with disabilities across Egypt. The program addresses systemic vulnerabilities by fostering inclusive social environments, strengthening family and community structures, and enhancing institutional capacities to deliver accessible services. Projects must champion a rights-based framework that shields children with disabilities from discrimination, abuse, and neglect while actively encouraging their participation in school and community life. Successful consortia will implement comprehensive actions over a multi-year period, channeling a significant portion of their resources as financial support to local third-party entities with proven grassroots experience. Eligible lead applicants must be established non-profit legal persons from qualifying member states or Egypt itself, working alongside mandatory local co-applicants. By investing in these systemic and community-level interventions, the initiative paves the way for a more equitable society where every child can thrive in a protected and supportive environment.

82. Catalyzing Social Cohesion and Peacebuilding Initiatives Across Communities in Syria

DONOR: Foreign, Commonwealth & Development Office

Grants For Global highlights a dedicated funding channel from the UK Office for Syria designed to foster long-term peace, reconciliation, and gender equality in the region. The programme invites innovative, locally informed project proposals from civil society organizations that directly address complex challenges around social cohesion, transitional justice, and community-level tension reduction. Emphasizing authentic Syrian voices and lived experiences, the initiative seeks catalytic interventions capable of bridging divides across conflict lines and reinforcing stability. Eligible Syrian not-for-profit entities must demonstrate robust registration, legal compliance, and operational track records spanning multiple governorates. Applicants are required to submit comprehensive documentation detailing their project logic, risk mitigation strategies, monitoring frameworks, and activity-based budgets. Through accountable grants, successful organizations receive the financial backing necessary to implement transformative peacebuilding methodologies and drive meaningful social progress within their communities.

83. Recruiting and Retaining Leading Biomedical Research Talent at Danish Host Institutions

DONOR: Novo Nordisk Foundation

Our research team presents a prestigious international funding opportunity intended to attract and retain world-class biomedical researchers within Denmark's scientific ecosystem. Designed for established principal investigators with extensive leadership experience in independent research, the program encourages cross-border scientific collaboration to tackle pressing global health challenges. The initiative prioritizes core domains such as basic biomedicine, clinical and translational medicine, endocrinology, and metabolism, enabling laureates to significantly expand their investigative programs. Successful fellows are required to maintain a strong physical presence at a Danish host institution, dedicating a substantial majority of their working time on-site while balancing clinical duties where applicable. The program provides robust, multi-year financial backing to help researchers fully establish their primary groups and state-of-the-art laboratories within the country. This strategic investment not only elevates individual research trajectories but also reinforces Denmark's standing as a premier global hub for cutting-edge biomedical innovation.

84. Enhancing Didactic Skills and Professional Development for Science Educators in Denmark

DONOR: Novo Nordisk Foundation

The Grants For Global editorial desk shines a spotlight on a specialized Danish funding mechanism created to elevate the quality of science, technology, and sustainability education for young learners. Administered through the Novo Nordisk Foundation, the Continuing Education Fund provides targeted financial support for science teachers seeking to upgrade their pedagogical techniques through approved short courses. The program covers essential expenses, including direct course fees and paid replacement hours for classroom participation, as well as dedicated time for educators to share acquired knowledge with institutional colleagues. Participating educational institutions coordinate upfront registrations and manage administrative logistics, with grant disbursements issued following the successful completion and reporting of educational activities. By investing in the continuous professional growth of educators, the fund inspires greater student curiosity and strengthens foundational competencies in vital scientific disciplines across the nation's schools.

85. Knowledge Partnership II Initiative Call for University Cooperation and Applied Research

DONOR: Italian Agency for Development Cooperation

Our editorial team is tracking an open call designed to bolster higher education systems, applied research, and local human capital development in designated partner countries. Aligned with strategic international cooperation priorities focusing particularly on the African continent, this opportunity fosters collaboration between universities, the research community, and institutional development partners. Eligible organizations can propose multi-year initiatives spanning several critical sectors, including rural development, marine and land management, sustainable energy, public health and WASH, industrial innovation, cultural heritage, and resilient urban communities. Successful proposals must advance quality, inclusive, and equitable education that directly contributes to sustainable development outcomes abroad. Applicants are required to deliver clearly defined, measurable objectives while upholding core principles of transparency, accountability, and long-term effectiveness. Proposals must incorporate mandatory co-financing commitments from the proposing entity and span an implementation window lasting multiple years, ensuring robust institutional partnerships and lasting local capacity building.

86. Mission Climate-Neutral City: Research, Technology, and Innovation Open Call

DONOR: Austrian Research Promotion Agency (FFG)

This flagship municipal innovation opportunity supports transformative research, technology development, and experimental projects aimed at accelerating the transition to climate neutrality in urban environments. Because cities consume vast amounts of energy and generate significant carbon emissions, the program empowers municipal leaders and local stakeholders to co-create practical solutions for sustainable urban living. Eligible participants can pursue diverse project formats, ranging from exploratory studies and cooperative industrial research to non-commercial innovation labs and wider community mobilization initiatives. Key strategic objectives include driving deep decarbonization, strengthening climate change adaptation, advancing circular resource efficiency, expanding renewable energy integration, and embedding gender and diversity considerations into every stage of development. Eligible entities—including municipalities, research institutions, and urban innovators—must address targeted focus areas such as advanced urban technologies, system innovations, and pilot demonstrations. Depending on the specific project track chosen, initiatives may be executed independently or through collaborative multi-partner consortia designed to position cities as pioneers of economic and social change.

87. National Urban and Community Forestry Challenge Cost Share Grant Program

DONOR: Forest Service

This community-focused initiative empowers local entities and regional organizations to tackle economic, health, and environmental hurdles through innovative approaches to urban forestry management. The program places a strong emphasis on creative wood resource utilization, encouraging partners to transform wood waste generated from routine tree pruning, hazardous removals, storm damage, and pest outbreaks into high-value secondary products. Communities can turn recovered timber into usable lumber, architectural slabs, custom furniture, flooring, or biochar, thereby generating local economic returns and strengthening environmental resilience. Priority is routinely awarded to initiatives that build upon established community forestry management plans, adhere to strict industry safety standards, and outline tangible workforce development or job training opportunities. Eligible applicants—encompassing local and tribal governments, educational institutions, public housing authorities, and nonprofit organizations—must demonstrate meaningful partnerships with professional industry groups and clearly articulate the anticipated economic, environmental, and public health benefits of their urban forestry projects.

88. Expanding Global Health Security Through Local Partnerships Grant Opportunity

DONOR: Centers for Disease Control-GHC

This strategic public health initiative aims to bolster national and regional capabilities to prevent, detect, and respond swiftly to high-priority disease outbreaks through empowered local collaboration. Grounded in longstanding multilateral frameworks for health security and international health regulations, the program targets critical technical pillars such as advanced laboratory diagnostics, workforce training, epidemiological surveillance, emergency management, antimicrobial stewardship, and immunization systems. Implementing entities work hand-in-hand with national public health institutes and government agencies to manage concurrent public health threats, expand field epidemiology networks, and operate specialized emergency coordination centers. Eligible organizations—including government bodies, academic institutions, nonprofit entities, and private sector groups—are invited to submit comprehensive proposals that build upon foundational health security milestones. By fostering multi-sector partnerships and strengthening local institutional preparedness, successful projects play a vital role in safeguarding populations and mitigating long-term systemic vulnerabilities to emerging biological hazards.

89. R&D Infrastructure Development Program in the Tkuma Region

DONOR: Israel Innovation Authority

This targeted regional development opportunity seeks to establish advanced technological innovation infrastructure to stimulate industrial growth, academic collaboration, and applied research in the designated area. The program is specifically structured to bridge existing market gaps, commercialize cutting-edge knowledge, and attract strategic private investment to foster a thriving local technological ecosystem. Eligible applicants are evaluated based on their ability to fulfill industrial research requirements, enhance global competitiveness, and deliver measurable economic and employment benefits to the broader national economy. Proposals undergo rigorous screening regarding the technological sophistication of requested equipment, long-term business growth potential, and transparent pricing structures governing shared industrial use. Approved participants receive substantial multi-year financial backing to support complex research facilities, ensuring that regional academic institutions and corporate partners can successfully transition innovative concepts into commercial implementation and robust industrial applications.

90. Impact Innovation Call for Research Expertise in Sustainable Metals and Minerals

DONOR: Vinnova

This specialized research funding opportunity invites collaborative consortia to enhance system understanding and doctoral-level expertise within the sustainable metal and mineral supply sector. Operating under a broader national impact innovation framework, the initiative focuses on building integrated models that elevate doctoral students as pivotal drivers of industry-wide transformation and green technology adoption. To qualify for support, applicants must assemble a diverse, multi-actor constellation comprising at least ten distinct project partners representing a broad cross-section of the entire mineral value chain. Successful initiatives are tasked with testing innovative educational and analytical tools, disseminating empirical findings effectively, and charting sustainable pathways for long-term sector management. The program provides substantial cost-sharing support to cover a significant majority of total eligible project expenses, empowering collaborative networks to modernize industrial practices and advance environmental sustainability across the raw materials ecosystem.

91. Supporting Specialized Anti-Organized Crime and Corruption Departments in Bosnia and Herzegovina

DONOR: U.S. Mission to Bosnia and Herzegovina

Our editorial team is tracking an open call inviting qualified individuals to provide high-level expert advisory and mentoring services to specialized anti-organized crime and corruption departments across Bosnia and Herzegovina. This initiative targets the enhancement of prosecutorial capacities within the Federation of Bosnia and Herzegovina's Specialized Department for Corruption and Organized Crime as well as its Republika Srpska counterpart. Selected experts will deliver structured advisory sessions, engage in legal reform working groups, and offer case-based mentoring directly to prosecutors, judges, and investigators. Core objectives center on refining prosecutorial methodologies in alignment with regional anti-corruption legislation and establishing systematic case prioritization frameworks to manage complex, high-level caseloads. By participating in this opportunity, successful applicants will help institutional frameworks better handle complex corruption matters and identify cases featuring a United States nexus. Individual applicants are fully eligible to put forward their credentials for this rigorous justice-sector support initiative.

92. Empowering Irish Creatives Through the TV Drama Production Grant Programme

DONOR: Screen Ireland

Independent production companies operating in Ireland have a compelling opportunity to secure backing for television drama series that originate and are creatively led by local talent. The programme is specifically designed to foster indigenous TV content that holds strong appeal for both domestic and international audiences and marketplaces. Key priorities for successful proposals include carrying out principal photography within Ireland, prioritizing the professional development of Irish female talent, and supplying advanced script bibles along with comprehensive episode outlines. Furthermore, projects that incorporate the highest possible number of completed scripts will be evaluated very favorably during the review process. Beyond boosting creative and professional growth for local storytellers, funded productions must genuinely reflect Irish cultural elements while ensuring that practical management remains firmly in Irish hands. Eligible applicants must be independent production companies officially registered in the Republic of Ireland, maintain a physical office and staff presence there, and hold clear rights to any adapted material alongside pre-existing agreements with key creative leads.

93. Empowering Indian Civil Society for Inclusive Governance and Sustainable Growth

DONOR: European Commission (EC)

Civil society organizations and non-governmental entities working across India are invited to apply for a comprehensive call for proposals aimed at advancing good governance, sustainable development, climate action, and inclusive economic growth. The initiative is structured around two distinct lots, with the first focusing on enhancing civil society participation in EU-India policy dialogues, green economic development, and Global Gateway initiatives nationwide. The second lot specifically targets organizations operating in the North Eastern Region of India to drive climate resilience, participatory governance, and sustainable value chains. Selected organizations will engage in a wide array of activities encompassing clean energy, circular economy practices, water management, sustainable urbanization, and targeted policies supporting women, youth, and vulnerable populations. This funding mechanism seeks to solidify local civil society groups as vital contributors to evidence-based advocacy, community empowerment, and responsible private sector engagement. Eligible organizations include non-profits and non-governmental bodies established in India, European Union Member States, or European Economic Area countries.

94. Advancing Integrated Water Resources Management and Climate Resilience in Ethiopia

DONOR: Italian Agency for Development Cooperation

Eligible non-profit organizations have the chance to secure funding dedicated to improving climate-smart water management and building long-term community resilience across Ethiopia's critical hydrographic basins. The programme focuses on key regions including the Awash, Wabi Shebele, and Danakil basins, addressing pressing vulnerabilities to climate change and chronic drought conditions. Successful implementers will work to enhance technical capacities across federal, basin, and sub-basin levels, support the creation of robust basin plans, and improve integrated information systems and institutional coordination. Additional focus areas involve deploying site-specific Nature-based Solutions for land degradation rehabilitation and water quality improvement, all while actively raising community awareness and boosting livelihoods. To qualify as lead applicants, organizations must be legally registered non-profit entities—such as NGOs—that have maintained official registration with the relevant authority in Ethiopia for at least three years prior to the call publication, demonstrating deep operational readiness and contextual expertise.

95. Driving Circular Economy Innovation and Green Solutions in the Kyiv Region

DONOR: Regional Innovation Valleys for Circular Economy

Public and private bodies, universities, research institutions, and enterprises operating within the Kyiv region of Ukraine are encouraged to apply for targeted cascade funding supporting regional circular economy initiatives. Co-funded by the European Commission under Horizon Europe, this interregional cooperation programme seeks to strengthen local innovation ecosystems through practical sustainability projects. Applicants can propose interventions across five vital thematic areas: construction and demolition waste circularity, circular energy integration utilizing local waste streams, electric vehicle battery recycling, circular textiles, and digital solutions for circular systems. Projects must be primarily executed within the Kyiv region, and successful participants will receive vital backing to scale their innovative green technologies and business models. Research organizations participating in these collaborative efforts may receive coverage for a substantial portion of their eligible non-commercial project costs, fostering vital recovery and sustainable modernization.

96. The Albania Reintegration Partnership: Supporting Sustainable Returns

DONOR: Foreign, Commonwealth and Development Office (FCDO)

Not-for-profit organizations, civil society groups, research institutions, and international consortia are invited to submit proposals for an initiative dedicated to the sustainable reintegration of Albanian nationals returning from the United Kingdom. The programme aims to strengthen local reintegration pathways, expand access to essential support services, and boost the capacity of Albanian institutions to effectively address the diverse needs of returnees. Applicants are expected to design evidence-based, adaptive strategies that deliver meaningful, long-lasting benefits well beyond the active grant period. Proposals must reflect a thorough understanding of the local context, prove strong value for money, and establish effective partnerships with relevant domestic stakeholders and institutions. Eligible entities must exhibit robust financial management, comply with strict safeguarding and due diligence standards, and demonstrate clear organizational capabilities to manage complex reintegration frameworks successfully.

97. Advancing Pastoral Climate Resilience: Joint Research and Technology Proposals

DONOR: Department of Agriculture, Food and the Marine

Our editorial team is excited to highlight an important international research opportunity focused on reducing greenhouse gas emissions within pastoral bovine production systems. This initiative invites collaborative scientific consortia to develop innovative, scalable solutions through a mission-focused framework that examines the cumulative impacts and implementation potential of various mitigation strategies. Eligible projects must tackle key areas such as advanced mitigation technologies, genetics, farm management interventions, accurate emissions measurement, adoption pathways, and comprehensive whole-farm systems approaches. To qualify, research partnerships must feature independent entities and designated project leadership based in both Ireland and New Zealand, alongside an overall coordinator. Teams are required to submit applications in English with financial figures reported in euros, and individual projects may span a maximum duration of forty-eight months. This collaborative funding mechanism aims to foster bilateral research excellence while driving climate-smart agricultural practices forward on a global scale. NGOs and academic institutions working at the intersection of environmental sustainability and livestock management will find this call particularly relevant for scaling impactful mitigation science.

98. Canada's Sectoral Workforce Innovation Fund: Collaborative Labour Solutions

DONOR: Government of Canada

Our research desk is tracking a major federal funding stream designed to tackle pressing skilled labour shortages and boost the resilience of vital economic sectors across Canada. This program mobilizes industry leaders, employers, and workforce development partners to design collaborative initiatives that respond to evolving national and regional labour market demands. Eligible applicants—including non-profit entities, Indigenous organizations, public governments, and educational bodies—can secure significant financial backing for projects lasting up to thirty-six months. Supported activities must accelerate sector capacity, strengthen supply chains, encourage technology adoption, and drive decarbonization efforts aligned with broader government strategies. Specifically, proposals should focus on scaling proven workforce models, building specialized talent pipelines for major projects, or mobilizing industry co-investments in emerging technology training. Successful initiatives must be highly collaborative, involving multiple stakeholders rather than benefiting a single enterprise, and directly serve individuals legally entitled to work in the country. This fund represents a vital resource for organizations striving to future-proof key industries ranging from clean energy and construction to advanced manufacturing and the care economy.

99. Near East Regional Assistance Program: Strategic U.S. Diplomatic and Economic Grants

DONOR: Bureau of Near Eastern Affairs

Our editorial team brings forward a comprehensive annual program statement aimed at supporting innovative foreign assistance initiatives throughout the Near East. This funding opportunity invites eligible organizations to execute projects that advance diplomatic, security, and economic objectives by leveraging American enterprise and market-driven principles. Priority thematic areas encompass critical infrastructure development, energy exports, trade facilitation, advanced manufacturing, and emerging technologies such as artificial intelligence and telecommunications. Furthermore, country-specific priorities have been established for multiple nations across the region to encourage regulatory reform, commercial engagement, and private sector capacity building. Eligible entities—including non-profit organizations, educational institutions, for-profit enterprises, and public international bodies—may propose performance periods lasting between one and three years. Applicants must demonstrate operational capacity within target countries and maintain strict compliance with relevant federal laws and administrative policies. This initiative offers a strategic platform for implementers dedicated to fostering sustainable economic recovery and resilient market integration in complex geopolitical environments.

100. Malta Interest Subsidy Scheme: Supporting Band Club Infrastructure and Culture

DONOR: Arts Council Malta

Our resource guides regularly spotlight niche community support mechanisms, and this Maltese funding scheme offers vital financial relief for local band clubs seeking to modernize. Designed to ease the burden of approved bank loans, the initiative helps these voluntary community organizations invest in essential infrastructure, cultural activities, and long-term financial sustainability. By subsidizing a portion of accumulated interest, the program preserves valuable cultural traditions, community identity, and youth engagement in music and the performing arts. The support framework calculates relief against a defined maximum loan ceiling, ensuring transparent and proportionate assistance without disrupting broader market competition. Depending on the nature of their organizational activities, applicants can apply through dedicated pathways covering either State aid regulations or non-State aid parameters. Successful participants can benefit from interest subsidies spanning up to ten consecutive years of their loan duration. This targeted intervention provides an indispensable safety net for grassroots cultural institutions striving to maintain their historic buildings and community services.

101. UK Createch Infrastructure: CoSTAR Showcase Labs Commercialisation Grants

DONOR: UK Research and Innovation

Our editorial team highlights a prestigious UK research infrastructure opportunity designed to drive creative technology commercialisation within the screen and performance sectors. This initiative invites eligible research organizations to establish state-of-the-art Showcase Labs that focus on near-market research, innovation, and technological adoption. Successful consortia will act as regional and national hubs, coordinating advanced R&D programs, fostering enterprise functions, and providing crucial commercialisation pathways for industry partners. Applicants are required to build robust partnerships that include at least one commercial co-location entity alongside a local or combined economic development authority. To qualify for the substantial grant investment, applicant consortia must successfully secure third-party match funding that meets or exceeds fifty percent of their requested budget. This program empowers leading institutions to upgrade their creative R&D facilities and accelerate cutting-edge technological advancements for the UK's thriving creative industries.

102. Expanding UK Creative R&D: CoSTAR Satellite Labs Accessible Infrastructure Open Call

DONOR: UK Research and Innovation

Our resource team is following an open call for UK research organizations to lead consortia in establishing Satellite Labs that enhance creative research infrastructure. Operating as an expansion of a national creative network, this initiative seeks to boost regional access, network cohesion, and alignment with emerging technologies like generative AI across screen and performance fields. Satellite Labs will be co-sited directly with industry production companies to coordinate specialized R&D programs, manage dedicated facilities, and disseminate vital research outcomes over a three-year operational window. Eligible applicant consortia must incorporate at least one commercial or industry partner and a local economic development authority, while demonstrating a firm commitment to equality, diversity, and inclusion. Projects are required to secure robust third-party match funding totaling at least half of the requested amount, with specific administrative cost-sharing guidelines applied by the funding council. This open call presents an exceptional avenue for academic and industry collaborators to establish enduring, co-invested research facilities that champion regional creative innovation.

103. International Space Sector Partnership and Innovation Grants

DONOR: UK Space Agency

This funding opportunity invites UK-based organizations to spearhead collaborative projects with international partners, driving forward technological innovation, long-term economic growth, and strategic capabilities within the domestic space sector. Established to deepen global relationships and reinforce the nation's standing as a premier space collaborator, the program champions high-value joint ventures, increased market access, and vital export opportunities while simultaneously addressing national security priorities. While giving special priority to partnerships rooted in specific major international economies, the initiative remains broadly open to strong cooperative proposals across other global jurisdictions that align closely with national aerospace goals. Successful initiatives are expected to yield measurable advantages, such as bolstering industrial competitiveness, strengthening supply chain resilience, and developing cutting-edge technologies essential for future exploration missions. Eligible applicants span industrial entities, academic institutions, and public sector research bodies operating out of the United Kingdom, with strict rules permitting only a single application per lead organization. Prospective participants must present a rigorous, milestone-driven delivery plan that satisfies technical, commercial, and administrative benchmarks, ensuring all awarded initiatives launch and conclude within the stipulated multi-year timeframe.

104. Domestic Tin Can Manufacturing Facility Support Program

DONOR: Ministry of Fisheries, Agriculture and Ocean Resources

Designed to establish a state-of-the-art tin can production facility within the Maldives, this matching grant initiative expands local manufacturing capacity to satisfy rising demand driven by expanding regional cannery operations. The program directly addresses historical vulnerabilities by reducing dependence on imported packaging, thereby shrinking international shipping delays, lowering operational costs, and fortifying the supply chain resilience of the domestic fisheries industry. Beyond strengthening the seafood value chain, the undertaking aims to generate valuable industrial employment opportunities, curb greenhouse gas emissions tied to freight transport, and stimulate sustainable economic advancement across the region. Financial support is structured as a co-investment model where the allocated grant covers a specified portion of the overall project expenses, requiring recipients to secure the remainder through commercial bank financing, self-funding, or other verifiable mechanisms. Participation is strictly restricted to business and private sector entities, welcoming established commercial companies, startups, joint venture enterprises, and new investors eager to expand their footprint within the local packaging and manufacturing ecosystem.

105. Fisheries Industry Decarbonization and Energy Efficiency Grants

DONOR: Ministry of Fisheries, Marine Resources and Agriculture Maldives

This specialized ministry-led initiative accelerates the integration of renewable energy sources and energy-efficient technologies across existing fish and seafood processing infrastructure in the Maldives. The program aims to modernize legacy facilities, slash operational overhead, and elevate the international competitiveness of local fisheries enterprises by supporting critical green transitions. Eligible capital investments include the installation of solar photovoltaic grids, upgrades to high-efficiency machinery, the deployment of smart energy monitoring technologies, and the infusion of capital needed to bring ongoing green initiatives to full operational status. By encouraging environmentally responsible practices, the program not only drives operational efficiency and cuts energy consumption but also helps cultivate safer, more sustainable working environments and creates new green jobs within the sector. Only registered private sector fish and seafood processing companies operating locally are eligible to participate in this co-investment scheme, where the primary grant covers a defined percentage of approved expenditures and remaining costs must be covered by verifiable organizational financing.

106. UK-Singapore Industrial Research and Development Collaboration

DONOR: Innovate UK

This bilateral funding competition brings together business enterprises from the United Kingdom and Singapore to advance collaborative research and development in critical technology and industry domains. The initiative serves to deepen technological ties between both nations, fast-tracking innovative solutions across a wide array of advanced manufacturing, clean energy, life sciences, and digital frontier sectors—including semiconductors, artificial intelligence, quantum computing, cybersecurity, and engineering biology. Proposals must feature balanced technological contributions and active participation from separate legal entities in both jurisdictions to guarantee genuine international cooperation and mutual benefit. UK-based partners can request substantial financial support for projects spanning multiple years, provided the vast majority of project activities and expenditures are concentrated domestically. Every participating consortium must feature at least one officially registered business entity from Singapore working hand-in-hand with their British counterparts to tackle complex technological challenges and commercialize breakthrough innovations.

107. Electricity Demand Turn Up Trial for Flexibility Providers

DONOR: Innovate UK

This expression of interest competition invites UK-based flexibility service providers to participate in an innovative energy trial designed to test demand-side solutions within the national electricity grid. The program evaluates whether rebating specific final consumption levies for verified demand turn up activities can enhance cost competitiveness, incentivize active consumer participation, and minimize the curtailment of renewable power generation. Selected participants—including energy suppliers, aggregators, and commercial entities—will deploy live propositions through established energy markets, pass financial rebates directly to participating consumers, and assist with comprehensive monitoring and evaluation activities. Eligible organizations must be registered businesses or non-profits operating within the electricity sector with an existing customer base of electricity consumers and the technical capacity to execute demand-side propositions. All project activities must take place within the UK, requiring close collaboration with government departments, research councils, and designated delivery leads throughout the short-term trial period.

108. State and Tribal Support for Child and Youth Trafficking Survivors

DONOR: Office for Victims of Crime

This targeted funding program empowers state governments and federally recognized Native American tribal entities to establish and expand coordinated, multidisciplinary approaches supporting children and youth who have survived human trafficking. The initiative is structured to bridge gaps between local policy and practical programming, fostering comprehensive statewide and tribal networks capable of addressing all legally recognized forms of trafficking. Recipients can utilize the awards to enhance systemic responses, integrate multi-agency services, and improve long-term well-being and recovery outcomes for vulnerable minor populations. Eligible applicants are limited strictly to official state government agencies and governing bodies of federally recognized tribes seeking to scale up their protective infrastructure. Through these cooperative agreements, administrators can build robust, trauma-informed frameworks that fundamentally transform how communities identify, protect, and serve young survivors.

109. Establishing Private Angel Networks to Boost Early-Stage Tech Investment

DONOR: Israel Innovation Authority **GRANT SIZE:** \$500,000 to \$1 million

Our editorial team is tracking an important competitive opportunity designed to expand early-stage venture funding for high-risk technology companies in Israel. This initiative focuses on setting up specialized private investor clubs to channel vital capital into startups navigating their crucial Pre-Seed and Seed funding rounds. By bringing together seasoned angel investors and promising innovators, the program aims to ramp up the overall volume of domestic venture investments and multiply the number of tech-driven businesses successfully launching operations locally. Selected operators will receive multi-year franchise support to manage these clubs, connecting members with pioneering ventures while streamlining investment evaluation and oversight. Successful franchisees will also cultivate valuable strategic partnerships with venture capital firms, industrial leaders, and academic institutions to maximize financial returns. Eligible applicants comprise legally incorporated Israeli corporations—both for-profit and non-profit—that are prepared to employ a dedicated, full-time Club Manager to steer the initiative's daily operations and long-term networking goals.

110. Collaborative Marine Energy Research and Blue-Tech Innovation Grants

DONOR: Israel Innovation Authority **GRANT SIZE:** \$500,000 to \$1 million

Our research desk highlights a specialized funding initiative that bridges academia and industry to accelerate breakthroughs in marine and ocean-based energy technologies. This program champions applied research and knowledge transfer, driving projects that focus on renewable energy generation, advanced storage and transmission, and enhanced energy efficiency within maritime environments. By fostering cooperation between research institutions and industrial partners, the initiative seeks to expand Israel's renewable energy portfolio, minimize environmental footprints through smart marine engineering, and successfully commercialize academic prototypes. Eligible participants include industrial corporations and technology transfer entities representing academic bodies, provided that every project features a genuine partnership between commercial and research stakeholders. Funding is split across dedicated tracks for industry and academia, offering robust financial backing to transition experimental marine concepts into commercially viable, market-ready solutions that bolster the nation's sustainable energy infrastructure.

111. Empowering Zimbabwean Women's Rights Organizations for Gender Equality and Inclusion

DONOR: European Commission (EC) **GRANT SIZE:** \$500,000 to \$1 million

Our editorial team has reviewed a comprehensive call for proposals aimed at bolstering civil society organizations dedicated to advancing gender equality and women's empowerment across Zimbabwe. This program reinforces the operational capacity of women-led networks and rights groups, equipping them to actively monitor, influence, and improve accountability regarding national, regional, and international commitments on gender-based violence and social inclusion. Funded projects will champion grassroots solutions that increase female participation in local economic development, encourage inclusive public dialogue, and foster green economic growth through rights-based and gender-transformative approaches. Implementing partners are expected to channel a substantial portion of their funding as financial support to third-party grassroots women's organizations. Eligible applicants include established non-profit civil society entities based in Zimbabwe, EU member states, or eligible development countries, as well as qualified international organizations. Proposed initiatives must span multi-year implementation periods and follow strict procedural guidelines for submission through standard European Commission portals.

112. Academic Startup Acceleration Through CZS Innovation Teams Funding

DONOR: Carl-Zeiss-Stiftung **GRANT SIZE:** \$500,000 to \$1 million

Our resource desk presents a valuable funding pathway designed to help academic research teams transition their scientific discoveries into commercially viable startup ventures. Operating within designated regional jurisdictions, this initiative targets researchers nearing the completion of their doctoral studies, bridging the critical gap between laboratory findings and market application. The program provides substantial financial backing to cover essential personnel expenses for potential founders alongside operational activities that advance the commercialization process. Successful teams must base their projects on their own original research, possess clear initial insights into their target market and business model, and commit to working full-time under the guidance of an assigned mentor. Depending on the size of the founding team, awards provide multi-year support intended to secure market-oriented, third-party follow-on financing and establish sustainable, high-impact business enterprises stemming from academic innovation.

113. Twinning Partnership for Phytosanitary Systems and Food Safety in The Gambia

DONOR: European Commission (EC) **GRANT SIZE:** More than \$1 million

Our editorial team highlights a specialized institutional capacity-building initiative aimed at modernizing sanitary and phytosanitary (SPS) frameworks and food safety controls within the horticultural sector in The Gambia. As part of a broader national strategy to transform agri-food systems sustainably, this twinning project focuses on upgrading the regulatory, technical, and institutional capabilities of the country's Food Safety and Quality Authority. Selected partners will collaborate closely to align local food safety protocols with rigorous international and European standards, enhance inspection systems, and build robust technical expertise in risk assessment and quality management. Given the institutional nature of this intervention, eligible applicants are strictly limited to public administrations and mandated bodies from European Union member states acting through designated national contact points. The selected European public sector partners will deploy experienced project leaders and resident advisors to execute comprehensive capacity-building activities over an intensive implementation timeframe.

114. Regional Innovation Valleys: Advancing Circular Economy Solutions in Greece

DONOR: Regional Innovation Valleys for Circular Economy **GRANT SIZE:** \$500,000 to \$1 million

Our resource desk features a major interregional innovation initiative designed to accelerate circular economy practices and sustainable development across Greek territories. Co-funded under broader European research frameworks, this call for proposals targets critical sustainability challenges including construction and demolition waste circularity, municipal waste-to-energy integration, electric vehicle battery recycling, textile industry circularity, and advanced digital solutions for environmental management. The program utilizes cascade funding to empower a diverse range of local actors—such as governmental bodies, municipalities, research centers, universities, non-profits, and civil enterprises—whose statutory objectives encompass natural or urban environmental protection. Participating entities can secure substantial financial support for collaborative projects that strengthen local innovation ecosystems, foster interregional cooperation, and drive the practical implementation of high-impact circular economy technologies throughout the region.

115. Empowering Agroforestry and Forest Restoration Initiatives in Karamoja

DONOR: Italian Agency for Development Cooperation **GRANT SIZE:** More than \$1 million

This funding opportunity invites eligible civil society organizations to spearhead impactful agroforestry and environmental protection initiatives within the Karamoja region of Uganda. The program is specifically structured to enhance regional tree cover, foster long-term forest conservation, and build resilient, regenerative supply chains that support local communities. By engaging grassroots stakeholders and institutional partners, the initiative champions sustainable natural resource management and climate change adaptation. Successful implementers will receive comprehensive backing to execute projects lasting up to two years, directly contributing to ecological recovery and sustainable rural livelihoods. Applicants must navigate rigorous administrative and legal protocols, proving full compliance with regulatory frameworks, financial accountability standards, and specialized social inclusion criteria. Through structured institutional support and community-driven actions, the initiative ensures that environmental stewardship translates into enduring economic and ecological benefits for the region.

116. Advancing Collaborative Industrial Research and Breakthrough Technologies in Luxembourg

DONOR: Luxinnovation

This open call is designed to accelerate industrial competitiveness by fostering cutting-edge applied research and development partnerships across Luxembourg's economic landscape. The initiative seeks to bridge the gap between academic research and corporate application, stimulating the creation of pioneering technologies, services, and internal processes. Eligible collaborative consortia—comprising qualified commercial entities and recognized national research organizations—can secure substantial financial backing to pursue ambitious, high-impact projects. By balancing public and private contributions, the program encourages deep scientific collaboration while steering clear of redundancies with specialized thematic calls. Participants will leverage advanced technological insights to elevate national innovation capacity, though specific exclusions such as doctoral student research costs apply. Ultimately, this framework strengthens regional economic resilience by embedding breakthrough scientific advancements directly into industrial practice.

117. Expanding Heavy-Duty Electric Vehicle Charging Networks Across Sweden

DONOR: Swedish Energy Agency

Commercial enterprises operating within Sweden are invited to apply for financial assistance dedicated to establishing non-public and semi-public charging infrastructure tailored for heavy trucks and buses. This strategic grant initiative aims to fast-track the electrification of heavy commercial transport, helping businesses integrate sustainable fleet operations seamlessly. Qualified applicants can secure funding to cover a significant portion of eligible expenses associated with constructing, installing, and expanding robust charging facilities on business properties, including connected battery storage solutions. The initiative allows for partial coverage of equipment acquisition costs when specific technical standards are achieved, helping organizations offset heavy capital outlays. Selected projects must successfully finalize their installations ahead of the late-decade deadline and maintain continuous operational status for a minimum of three years post-completion. Through targeted capital injections, the program empowers commercial actors to modernize their operational footprints and actively contribute to national transport decarbonization goals.

118. Driving Regenerative Agriculture and Farmer Advisory Networks in Lower Silesia

DONOR: EIT Food

EIT Food is seeking qualified legal entities or collaborative consortia to roll out an extensive, farmer-centric advisory and training program across the Lower Silesia region of Poland. Anchored within a broader framework for resilient agricultural landscapes, this multi-year intervention aims to engage hundreds of local producers and tens of thousands of hectares in regenerative farming practices by the end of the decade. The selected implementer will deliver comprehensive training, data collection, soil-sampling campaigns, and peer-learning opportunities tailored to growers cultivating essential rotational crops like wheat, sugar beet, and oilseed rape. Operating via established corporate value chains and targeted outreach, the project requires robust local-language communication capabilities alongside rigorous monitoring, reporting, and verification methodologies. Organizations with a proven track record in agronomic advisory services are invited to apply for substantial subgrant support to execute these vital landscape-level transformations.

119. Boosting Advanced Manufacturing Competitiveness and Innovation Capacity in Ontario

DONOR: Ministry of Economic Development, Job Creation and Trade

Advanced manufacturing enterprises situated in Ontario can tap into targeted financial assistance designed to modernize production technologies, enhance workforce skills, and drive regional competitiveness. This provincial initiative assists established small and medium-sized manufacturers with capital equipment investments and strategic expansions that generate measurable economic impacts. Depending on project scope and location, participants can access structured funding tiers that accommodate smaller regional businesses as well as large-scale strategic initiatives that create numerous local employment opportunities. Eligible projects must demonstrate a commitment to private sector investment, job creation, or upskilling existing staff while adopting innovative manufacturing technologies. Applicants must meet baseline operational tenure and minimum employment thresholds, ensuring that public support catalyzes genuine commercial growth and strengthens key industrial clusters across the province.

120. Accelerating Maritime Decarbonization Through Port-Based Vessel Charging in Sweden

DONOR: Swedish Energy Agency

Port authorities and maritime operators in Sweden can access substantial grant support aimed at deploying specialized charging infrastructure for heavy transport vessels. As part of a broader push to electrify heavy transport sectors, this funding mechanism seeks to overcome infrastructural barriers and facilitate the transition of commercial ships to electric propulsion. The initiative provides capital assistance for the construction, installation, and expansion of port-side charging facilities and associated electrical energy storage systems. By covering a major share of eligible development costs—with provisions for additional equipment purchase incentives—the program significantly lowers the financial barrier to adopting green maritime technology. Successful projects will play a critical role in curbing harmful port emissions and establishing a resilient, sustainable network for electrified waterborne transport along Sweden's coastline.

121. Unlocking Concessional Finance for Nature-Based Tourism Enterprises in Uganda

DONOR: United Nations Capital Development Fund **GRANT SIZE:** More than \$1 million

Our editorial team is closely following an important new financing window designed to expand capital access for micro, small, and medium-sized enterprises operating within Uganda's sustainable tourism sector. This initiative places a strong emphasis on empowering women-led businesses, recognizing that nature-based tourism acts as a powerful catalyst for inclusive economic growth, vital job creation, and long-term environmental protection across rural areas. Eligible participants include legally registered commercial banks, microfinance institutions, and fintech enterprises with established operational histories in the country. Selected partners will work alongside international development administrators to co-create specialized financial products that encourage institutional capacity building, robust risk management, and vital sustainability investments like renewable energy integration and water management. Prospective applicants must demonstrate clear alignment with these strategic intervention areas and present a credible roadmap for scaling their lending portfolios. Organizations must maintain clean records free of international sanctions and participate fully in structured due diligence evaluations to secure these multi-year partnership opportunities.

122. Scaling Clean Cooking and Climate Action in Ethiopian Schools

DONOR: Education Cannot Wait

Our resource desk highlights an innovative pilot initiative in Ethiopia that tackles the convergence of acute energy poverty, ongoing educational demands, and pressing climate adaptation challenges. By deploying advanced clean cooking infrastructure and related mitigation strategies directly into schools, the programme seeks to demonstrate how educational institutions can function as active hubs for generating high-quality carbon credits. This multi-phase undertaking aims to align future carbon offsets with internationally recognized standards and position projects for broader international climate compliance frameworks. Qualified organizations must bring extensive operational experience in managing large-scale education or energy programs, combined with a proven capacity for executing carbon crediting initiatives across multiple regional territories. Implementation partners will be expected to strictly adhere to established standards governing gender equity, community inclusion, and child safeguarding throughout the operational lifecycle. The initiative provides a structured pathway for experienced developers to unlock pioneering climate finance streams dedicated to strengthening vulnerable educational communities.

123. Advancing Central Banking Standards and European Integration in Moldova

DONOR: European Commission (EC)

Our editorial coverage features a targeted institutional twinning opportunity aimed at reinforcing the core regulatory, supervisory, and operational capabilities of the National Bank of Moldova. Designed to support the country's progressive integration path toward European standards, this capacity-building project focuses heavily on harmonizing local central banking practices with established union-level legal frameworks. Public administrations and officially mandated bodies representing European Union member states are uniquely positioned to submit proposals through their respective national administrative contact points. The project facilitates close peer-to-peer institutional cooperation over an extended implementation timeline to ensure sustainable regulatory alignment and robust institutional governance. Participating public entities will play a direct role in transferring critical expertise, refining supervisory protocols, and supporting the overarching structural modernization of Moldova's central banking sector. This partnership represents a valuable mechanism for public sector institutions to contribute meaningfully to regional stabilization and institutional convergence.

124. Recruiting Global Neuroscience Leaders to Danish Academic and Clinical Institutions

DONOR: Lundbeck Foundation

Our team reviews a prestigious recruitment initiative sponsored by a leading Danish foundation aimed at strengthening national excellence in neuroscience research and associated disciplines. The programme provides substantial long-term financial support specifically structured to help universities and hospital facilities successfully attract top-tier international researchers or industry experts into permanent faculty roles. Support levels are tailored for both associate professors and full professors, allowing host institutions to integrate world-class talent into their strategic academic plans. Eligible candidates must have maintained active research positions outside of Denmark or within corporate industry settings for a minimum period prior to their recruitment appointment. The application process requires close institutional coordination, beginning with a formal pre-approval stage submitted by institutional leadership before detailed candidate research proposals are reviewed. Furthermore, the selection guidelines strongly emphasize institutional diversity considerations, including balanced representation regarding gender and ethnic background among recruited personnel.

125. Strengthening Flood and Cyclone Community Preparedness Across Mozambican Districts

DONOR: Enabel

Our research team draws attention to a localized resilience initiative operating within the Mossuril and Namacurra districts of Mozambique to mitigate severe weather risks from seasonal floods and cyclones. This project addresses critical local infrastructure and preparedness gaps by upgrading vulnerable schools into multi-purpose, climate-resilient shelters while simultaneously strengthening community-managed early warning response networks. Eligible applicants comprise established national or international non-profit organizations, foundations, and non-governmental entities possessing demonstrated operational capabilities within the country. Project designs must incorporate inclusive disaster risk governance, emphasize gender equality, and establish clear institutional anchoring mechanisms to guarantee long-term local ownership. Successful organizations will receive dedicated grant allocations split across specific district lots to implement community-based risk reduction strategies and protect vital livelihood assets from climate shocks.

126. Driving Austria's Clean Energy Transition Through Targeted Innovation Research

DONOR: Austrian Research Promotion Agency (FFG)

Our editorial spotlight covers a comprehensive research and development call aimed at accelerating Austria's transition toward absolute climate neutrality and sustainable systemic transformation. As part of a broader national framework, this initiative fosters interdisciplinary cooperation across industrial and academic sectors to build a robust, evidence-based knowledge foundation for future energy systems. Funding opportunities are structured around several critical pillars, including advanced energy generation and storage, hydrogen and carbon capture technologies, flexible grid integration, and socio-economic transformation dynamics. Applicants must demonstrate how their proposed initiatives contribute directly to strategic objectives such as enhancing national competence within global technology value chains and supporting decentralized, climate-resilient energy architectures. The programme welcomes collaborative R&D proposals that incorporate circular design principles, efficient component manufacturing, and intelligent control systems necessary for modernizing future energy infrastructures.

127. Empowering Global South and Danish Partnerships for Inclusive Development

DONOR: CISU – Civil Society in Development

This initiative provides valuable resources for civil society actors seeking to foster inclusive development and strengthen capacity through cooperative partnerships bridging Denmark and the Global South. By encouraging locally led interventions, the program ensures that grassroots organizations and community movements retain ownership over project design and execution while tackling pressing issues like inequality, discrimination, and barriers to public services. Participating groups benefit from multi-year support structures tailored to bolster citizen participation in governance and amplify marginalized voices within local and regional frameworks. Applicants must demonstrate a strong collaborative history and meet established organizational track-record thresholds to qualify for these funding streams. Interventions are structured to run over several years, requiring active financial or in-kind commitments from all participating partners and local stakeholders to guarantee long-term sustainability. This opportunity plays a crucial role in the sector by enabling civil society networks to hold institutions accountable and drive meaningful social change through cross-border solidarity.

128. Technical Assistance Initiative for Climate Loss and Damage Assessment in Haiti

DONOR: Santiago Network Secretariat

Organizations and technical experts are invited to submit proposals aimed at establishing a comprehensive national infrastructure to monitor, evaluate, and address climate-induced loss and damage within Haiti. This call seeks to build operational, methodological, and institutional foundations that generate standardized, disaggregated evidence regarding both economic and non-economic impacts. Selected implementers will help strengthen national readiness, improve data harmonization, and integrate climate risk considerations into broader governmental planning and international funding channels. A diverse range of entities—including international and local non-governmental organizations, academic institutions, UN bodies, and private sector firms—are eligible to participate either individually or by forming consortia through available partnership matchmaking tools. Applicants must hold or actively secure membership within the supporting global network prior to final selection, with all submissions processed digitally through designated grant portals. Ultimately, this effort empowers national stakeholders to systematically track environmental disruptions and formulate evidence-based responses to ongoing climate challenges.

129. Graduate and Postgraduate Fellowships in Food and Agricultural Sciences

DONOR: National Institute of Food and Agriculture

Accredited higher education institutions can secure funding to support new master's, veterinary, and doctoral students, thereby expanding the pipeline of domestic professionals equipped to meet critical agricultural and natural resource challenges. This educational initiative strengthens institutional training capacity and provides multi-year financial backing directly to qualifying full-time scholars pursuing specialized degrees. Eligible organizations include accredited U.S. colleges, universities, and eligible research foundations capable of conferring advanced degrees in agricultural sciences. Institutions are responsible for selecting and appointing fellows in alignment with their own program criteria within a specific timeframe following the award announcement. The initiative allows for structured sub-contracting and ensures that fellows receive continuous, uninterrupted support throughout their master's or doctoral tenure. By investing in the next generation of researchers and scientists, this program directly addresses workforce needs and advances innovation across the broader food and agricultural sector.

130. Translational Research Grants for Non-Communicable Disease Mitigation in South Africa

DONOR: South African Medical Research Council

South African research entities, public universities, and science councils are encouraged to apply for dedicated support targeting critical gaps in non-communicable disease research, with a specific focus on cardiovascular conditions, metabolic disorders, and cancer. Established to sustain the nation's scientific infrastructure and retain leading investigators in the face of shifting international funding landscapes, this program prioritizes translational approaches that bridge laboratory findings with clinical and population-based applications. Selected projects are expected to generate actionable evidence, innovative health interventions, and improved public health frameworks aligned with national priorities. Principal Investigators must be citizens or permanent residents employed by recognized local research institutions, while non-research entities and international bodies may participate solely as collaborators. Over a multi-year implementation cycle, successful teams will work to improve health outcomes, foster equitable access to medical innovations, and strengthen the overall responsiveness of the public health system.

131. Strengthening Polish Civil Society Resilience Against Digital Disinformation

DONOR: EEA Civil Society Fund

Registered civil society organizations in Poland can access targeted support designed to enhance public resilience against misleading information, digital manipulation, and AI-generated content. The initiative focuses on safeguarding democratic values, protecting human rights, and preserving public access to reliable information through critical media evaluation and responsible civic debate. A wide spectrum of domestic entities—including foundations, associations, social cooperatives, country housewives' associations, and faith-based public benefit organizations—are eligible to apply for project funding alongside dedicated capacity-building allocations. Successful applicants will implement activities that empower citizens and social organizations to navigate complex information environments safely and effectively. By investing in a large cohort of local implementers, this program reinforces democratic oversight and strengthens the operational capacity of the civic sector to counter coordinated disinformation campaigns.
