

GRANTS FOR GLOBAL
INTERNATIONAL FUNDING PARTNERS

RESOURCE GUIDE · 2026

Global Private Foundation Funding: A Resource for NGOs and Researchers

Explore a handpicked directory of international foundation grants tailored for non-profits, academic scholars, and changemakers. This guide connects your organization with worldwide philanthropic funding to diversify revenue streams, strengthen grant pipelines, and drive meaningful impact across global communities.

In This Guide

- 01** Supporting Early-Career Marine Conservationists and Researchers Worldwide
- 02** Empowering Grassroots and Indigenous Conservation Area Expansion
- 03** Fueling Student-Led Open Payment and Financial Inclusion Projects
- 04** Advancing Translational Research for Maternal and Infant Health
- 05** Bridging Academia and Industry Through Targeted Researcher Secondments
- 06** Driving Patient-Centered Interventional Clinical Trials in Oncology
- 07** BrightFocus Foundation FY27 Standard Funding Program in Alzheimer's Disease Research
- 08** John Templeton Foundation Interdisciplinary Grants and Research Initiatives
- 09** AXS Film Fund for Documentary and Nonfiction Media Creators
- 10** Physician Scientist Training Grant in Sleep and Circadian Science
- 11** Focused Projects Grant for Junior Investigators in Sleep Research
- 12** Nokia Visiting Professor Programme for Academic ICT Mobility
- 13** Advancing Global Pathology and Diagnostic Capacity Through Sustainable International Collaboration
- 14** Empowering Non-Profits to Drive Scientific Research, Health, and Sustainable Development Initiatives
- 15** Fostering Collaborative Research-Practice Partnerships to Transform Educational Systems and Equity
- 16** Catalyzing Ambitious Research Planning to Re-envision More Equitable Educational Ecosystems
- 17** Unlocking Breakthrough Potential in Human Immunology and Vaccine Development for Early-Career Investigators
- 18** Enhancing Child Nutrition and Community Resilience Through Sustainable School Canteens
- 19** Unlocking New Perspectives in American Art Collections
- 20** Advancing Drug Development and Research for Charcot-Marie-Tooth Disease
- 21** Empowering Mid-Career Researchers to Lead International Breakthroughs
- 22** Strengthening Institutional Research Capacity in Ophthalmology for LMICs
- 23** Global Public Health Awards for Early-Career Investigators in Developing Regions
- 24** Community and Environmental Advancement Support Through the Solvay Fund
- 25** Scaling Social Impact: The Draper Richards Kaplan Foundation Open Initiative
- 26** Empowering Early-Stage Change: DRK Foundation Capacity and Capital Support
- 27** Advancing LGBTI Equality and Inclusion Across Southern Africa
- 28** Unlocking Rights: Disability Rights Fund Open Call for Inclusive Futures
- 29** Mérieux Foundation Small Grants: Combating Infectious Disease Locally
- 30** Saving Lives at Birth: Research Grants for Maternal and Newborn Health
- 31** Empowering Early-Career Conservationists: Sub-Saharan Mammal Field Research Initiative

- 32** Catalyzing Purpose-Driven Enterprises for Social and Financial Inclusion in Asia
- 33** Advancing Biodiversity Conservation Science: Regional Researcher and Doctoral Support
- 34** Amplifying Conservation Knowledge: Academic Publishing Support for Regional Researchers
- 35** Investigative Journalism Initiative: Uncovering Farmed Animal Welfare Across Europe
- 36** AID4SME Open Call: Harnessing AI and Data Solutions for Industrial Sustainability
- 37** Empowering Investigative Journalism Across the Balkans and Visegrad Region
- 38** Restoring European River Ecosystems Through Strategic Dam Removals
- 39** Catalysing Sustainable Forestry Practice Through Science-Practitioner Collaboration
- 40** Accelerating Net-Zero Business Innovation and Clean Technology Adoption
- 41** Advancing Sustainable Technologies Through Earth-Abundant Materials Research
- 42** Pioneering Rapid Diagnostics for Lower Respiratory Infections and AMR
- 43** Advancing Hybrid Bio-Electrocatalysis Research through Interdisciplinary Consortia
- 44** Investigating the Critical Intersection of Extreme Heat and Hypertension
- 45** Promoting Health and Well-being in Vulnerable Childhood Social Initiatives
- 46** Nordic Project Grants for Industrial and Environmental Biotechnology
- 47** Fostering Sustainable Plant Science and Agri-Food Biotechnology Innovations
- 48** Empowering Civil Society to Prevent and Combat Gender-Based Violence
- 49** Advancing Brain and Intelligence Research Across the Nordic Region

01. Supporting Early-Career Marine Conservationists and Researchers Worldwide

DONOR: Save Our Seas Foundation **GRANT SIZE:** \$1000 to \$10,000

Here at Grants For Global, our team is constantly tracking opportunities that empower the next generation of environmental stewards, and this marine-focused initiative is a prime example. Designed specifically for early-career professionals within five years of completing their highest degree or professional qualification, the program provides essential backing for short-term research, conservation, and education projects. Applicants are expected to target marine chondrichthyan species—such as sharks and rays—through integrated initiatives that blend scientific investigation with tangible community awareness and local leadership. Projects can span up to a year and a half of activity, utilizing a structured two-stage online application process where final proposals are submitted by invitation. Supported activities frequently cover vital fieldwork needs, short-term staffing, and limited stipends for emerging scientists, while emphasizing local project ownership. By nurturing researchers early in their trajectory, this opportunity helps build long-term capacity for vulnerable marine ecosystems while encouraging global collaboration among conservation practitioners.

02. Empowering Grassroots and Indigenous Conservation Area Expansion

DONOR: Rainforest Trust **GRANT SIZE:** \$100,000 to \$500,000

For our nonprofit and community-led readers dedicated to preserving critical global habitats, this funding stream offers substantial backing for strategic land protection. The initiative is structured to help non-profit organizations, Indigenous Peoples, and local communities secure legal recognition for new or expanded protected and conserved areas. Successful projects generally focus on safeguarding globally significant populations of endangered species, preserving large swaths of high-integrity tropical and subtropical forests, or defending essential climate-mitigation ecosystems like peat swamps and mangroves. Applicants must be legally registered nongovernmental organizations operating in the target country and are required to demonstrate deep-rooted collaboration with local stakeholders, including adherence to Free Prior and Informed Consent protocols. The approach supports diverse conservation mechanisms, ranging from formal land titling and purchase to Other Effective Area-based Conservation Measures. Because each submission is evaluated individually based on its ecological value and long-term sustainability, this mechanism represents a major resource for landscape-level environmental defense.

03. Fueling Student-Led Open Payment and Financial Inclusion Projects

DONOR: Interledger Foundation **GRANT SIZE:** \$1000 to \$10,000

Our editorial team is excited to highlight this university-focused mini-grant program, which places financial technology innovation directly into the hands of student leaders. Aimed at student-run clubs and campus organizations across the globe, the initiative supports creative experimentation with open payments, digital financial inclusion, and interoperable financial infrastructure. Participating groups can explore these concepts through a wide array of formats, including hackathons, workshops, student research, awareness campaigns, and the prototyping of small-scale technology tools. Every project must be student-driven while securing necessary institutional backing, such as a faculty advisor or university administrator to oversee financial management and implementation. With a short implementation window spanning up to three months, the program encourages fast-paced, practical learning and peer collaboration. It serves as a fantastic catalyst for campus communities looking to engage deeply with equitable financial technologies and build awareness around modern payment systems.

04. Advancing Translational Research for Maternal and Infant Health

DONOR: March of Dimes **GRANT SIZE:** \$100,000 to \$500,000

Our research desk frequently reviews grants designed to bridge the gap between scientific discovery and clinical application, and this program focuses intensely on the critical realm of maternal and infant health. Established researchers holding doctoral-level credentials—such as health professionals, epidemiologists, and social scientists affiliated with universities, hospitals, or research institutions—can apply to tackle complex conditions affecting pregnancy and early-life outcomes. Particular emphasis is placed on translational studies examining spontaneous preterm birth, cardiovascular health during pregnancy, and related health factors spanning from gestation through the first year postpartum. Investigators from diverse organizational backgrounds, including nonprofits and startups, are welcome to apply as long as they hold an eligible faculty or equivalent role and do not hold concurrent funding from the same sponsor. Over a multi-year project timeline, awardees gain the resources needed to drive clinical relevance, reduce morbidity and mortality, and actively participate in collaborative scientific meetings and public-facing awareness efforts.

05. Bridging Academia and Industry Through Targeted Researcher Secondments

DONOR: The Royal Society **GRANT SIZE:** \$10,000 to \$100,000

Our team recognizes that fostering true innovation requires robust bridges between commercial enterprise and academic research, a gap this prestigious secondment scheme is built to close. The initiative invites experienced industrial scientists and entrepreneurs of any nationality with valid UK work eligibility to spend a dedicated portion of their work week embedded within a UK university. During a multi-year engagement, award holders collaborate closely with academic staff and students to translate research outcomes, promote commercialization, and share state-of-the-art industrial development practices. The funding helps cover a meaningful portion of the participant's basic salary, ensuring they can dedicate significant weekly time to mentoring, coaching, and building robust university-business partnerships. This setup not only elevates the professional development of the industrial expert but also infuses entrepreneurial confidence and industry insight directly into the academic ecosystem.

06. Driving Patient-Centered Interventional Clinical Trials in Oncology

DONOR: Rising Tide Foundation for Clinical Cancer Research **GRANT SIZE:** \$10,000 to \$100,000

Our grants review team notes that advancing cancer treatment options requires rigorous, patient-focused clinical research, which sits at the heart of this targeted funding opportunity. The program supports early- to late-stage interventional clinical trials—spanning specific phases of research—that prioritize therapy optimization, early detection, and the reduction of disease and treatment burdens. Eligible projects must integrate patient partner involvement into their core design and typically focus on generic drugs, previously registered treatments, or academic-led pharmaceutical developments. Investigators must hold a doctoral degree and a faculty appointment at an academic or research institution, demonstrating the independent capability to manage complex clinical trials safely and ethically. Although the funding does not cover total trial expenses, it provides crucial support for non-reimbursable patient care costs, participation travel, specialized studies, and partial personnel salaries. Welcoming international teams and diverse cancer research foci, this mechanism offers a robust pathway for investigators committed to enhancing patient quality of life.

07. BrightFocus Foundation FY27 Standard Funding Program in Alzheimer's Disease Research

DONOR: BrightFocus Foundation **GRANT SIZE:** \$100,000 to \$500,000

Our editorial team is tracking an important funding opportunity designed to advance scientific understanding, prevention, and treatment of Alzheimer's disease and related dementias. The BrightFocus Foundation has structured its Standard Award Program into two distinct pathways: an Early Career Track tailored for investigators within fifteen years of their terminal degree, and an Independent Investigator Track dedicated to highly competitive, innovation-driven studies. Academic institutions, nonprofits, governmental agencies, and startup biotechnology entities are all welcome to participate, alongside cross-disciplinary innovators from fields such as artificial intelligence, physics, and engineering. Successful proposals emphasize methodological rigor, data sharing, reproducibility, and preclinical or clinical design. The initiative supports work that contributes directly to diagnostic breakthroughs, novel interventions, and a deeper etiology of dementias. Grantees undertake projects that span multiple years of intensive investigation while adhering strictly to regulatory standards for human and animal research.

08. John Templeton Foundation Interdisciplinary Grants and Research Initiatives

DONOR: John Templeton Foundation

Nonprofit organizations and academic researchers exploring humanity's most profound and transcendent questions will find a compelling opportunity in the John Templeton Foundation's latest grant cycle. The Foundation champions rigorous inquiry across a diverse array of disciplines, encompassing character virtue development, life sciences, mathematical and physical sciences, public engagement, and the intersection of religion, science, and society. By fostering intellectual humility and open-minded dialogue, this funding stream bridges scientific, philosophical, and spiritual perspectives to enrich public discourse and personal growth. Grantees are encouraged to pursue transformative research that expands our comprehension of the natural and social worlds while nurturing ethical reflection and individual purpose. In addition to supporting foundational scholarship, the program places a significant emphasis on public outreach to ensure that project discoveries resonate with wider audiences. The overarching objective is to catalyze meaningful conversations that inspire curiosity and cultivate a generous concern for others across global communities.

09. AXS Film Fund for Documentary and Nonfiction Media Creators

DONOR: AXS Film Fund **GRANT SIZE:** \$1000 to \$10,000

Independent filmmakers and nonfiction media artists working on feature-length documentaries, experimental works, or new media projects have a dedicated avenue for financial support through the AXS Film Fund. This initiative places a core emphasis on elevating creators who identify as living with a disability as well as those originating from historically underserved communities. Projects may be positioned at any phase of production, from initial concept development and pre-production through filming, post-production, and final distribution. To qualify, applicants must apply as individuals—though utilizing a fiscal sponsor is permitted—acting as the primary director or producer while remaining independent of any degree-granting academic enrollment. Selected media creators receive valuable financial backing alongside stipend support to help bring their cinematic visions to fruition. Non-English submissions are welcomed provided they incorporate accurate English subtitles, while narrative fiction and commercially commissioned pieces remain strictly outside the program's scope.

10. Physician Scientist Training Grant in Sleep and Circadian Science

DONOR: AASM Foundation **GRANT SIZE:** \$10,000 to \$100,000

Early-career clinical investigators seeking dedicated time for mentored research and professional growth can look to a specialized funding vehicle focused on sleep medicine and circadian science. The Physician Scientist Training Grant provides crucial support for medical professionals holding an MD, DO, or equivalent degree who are within a decade of completing their post-doctoral training or stepping into their initial faculty appointment. Both domestic and international applicants are eligible to apply, provided they have not accumulated excessive independent research funding outside of basic training grants. The program accommodates projects involving human subjects, animal models, clinical methodologies, and specialized evaluation databases. Successful applicants receive multi-year support covering essential project expenses, including personnel effort, fringe benefits, consumable supplies, publication fees, and travel to present empirical findings at scholarly conferences. This mechanism aims to build a robust cadre of well-trained researchers equipped to advance scientific knowledge in sleep disorders and circadian biology.

11. Focused Projects Grant for Junior Investigators in Sleep Research

DONOR: AASM Foundation **GRANT SIZE:** \$10,000 to \$100,000

Junior investigators aiming to establish a solid research track record in basic, translational, clinical, or population-based sleep science will find targeted seed funding through this specialized grant competition. Designed to support early-stage scholars holding advanced professional degrees within ten years of their terminal training, the program requires applicants to address specific high-priority topics for its current cycle, such as pediatric sleep, idiopathic hypersomnia, or the comprehensive management of sleep apnea. Eligible candidates may apply from international institutions provided their organizations can manage funds denominated in U.S. dollars, though individuals with prior substantial independent research awards or relevant financial conflicts of interest are excluded. The one-year award functions as a crucial stepping stone, covering direct project costs such as research personnel, laboratory supplies, manuscript preparation, abstract submissions, and conference travel. Through this structured support, early-career scientists can successfully execute focused pilot projects and generate preliminary data for future investigations.

12. Nokia Visiting Professor Programme for Academic ICT Mobility

DONOR: Nokia Foundation

Academic institutions and distinguished researchers specializing in Information and Communications Technologies can leverage the Nokia Visiting Professor Programme to foster international collaboration and knowledge exchange. The initiative facilitates faculty mobility by enabling accomplished professors to undertake extended teaching and research visits either at universities within Finland or at international host institutions abroad. Eligible scholars must present a well-structured and feasible research plan that demonstrates clear scientific value, adheres to high ethical standards, and promises tangible benefits for the broader Finnish academic and research ecosystem. The programme specifically underwrites travel and accommodation expenses associated with the visiting appointment across an approved multi-month timeline. Proposals undergo rigorous evaluation by the Nokia Foundation during its biannual review cycles, with selection hinging primarily on academic merit, the quality of the proposed scholarly agenda, and the long-term potential for building durable international research partnerships in the ICT sector.

13. Advancing Global Pathology and Diagnostic Capacity Through Sustainable International Collaboration

DONOR: College of American Pathologists Foundation **GRANT SIZE:** \$1000 to \$10,000

Our team has been closely reviewing a valuable opportunity aimed at strengthening international healthcare systems by expanding vital pathology and laboratory services in under-resourced regions. This initiative is designed to support both individual practitioners and organizations that operate on limited budgets yet strive to make a profound difference in global health. Successful projects typically focus on a wide array of developmental needs, including comprehensive education and training for laboratory staff, patient care enhancements, laboratory quality improvements, and the modernization of diagnostic technologies. Furthermore, applicants can direct resources toward establishing standard operating procedures, upgrading facilities to meet international quality standards, and launching systems-strengthening initiatives like accreditation improvement programs. Eligible participants include global healthcare entities, international charitable non-profits, US-based tax-exempt organizations, and active clinical professionals engaged in expanding local diagnostic capabilities. Review committees evaluate submissions based on overall project merit and how effectively the proposed activities align with core laboratory enhancement goals. For NGOs and health advocates working to overcome diagnostic barriers in underserved communities, this program offers a practical pathway to build lasting local expertise.

14. Empowering Non-Profits to Drive Scientific Research, Health, and Sustainable Development Initiatives

DONOR: SENSE Foundation Brussels **GRANT SIZE:** \$10,000 to \$100,000

Our editorial staff highlights an international funding mechanism designed to support established non-profit entities tackling critical environmental, educational, and public health challenges. To qualify for consideration, applying organizations must demonstrate at least two years of continuous legal registration and operational experience. The program prioritizes initiatives centered on scientific research, environmental protection, sustainable development, health improvement—particularly focusing on genetics and nutrition—alongside student scholarships, arts and culture, and social inclusion. Additional areas of emphasis include promoting equality and diversity, advancing women in STEM, and providing charitable assistance to individuals experiencing temporary hardship. Applicants are expected to articulate clear problem statements, outline measurable outcomes, and demonstrate how the requested support will be utilized efficiently while keeping overhead expenses within strict limits. The selection committee favors projects that generate lasting societal impact and possess the capacity to attract complementary funding from other sources. By targeting well-established non-profits capable of delivering meaningful change, this opportunity helps organizations scale their community interventions and address pressing systemic needs effectively.

15. Fostering Collaborative Research-Practice Partnerships to Transform Educational Systems and Equity

DONOR: The Spencer Foundation **GRANT SIZE:** \$100,000 to \$500,000

Our research desk has identified a targeted grant program focused on bridging the gap between academic researchers, education practitioners, and policymakers to enact systemic educational change. The initiative supports collaborative partnerships operating across diverse learning environments, such as schools, universities, community centers, museums, and workplaces, with a strong emphasis on educational equity and capacity development. Eligible partnerships may involve school districts, state education bodies, community organizations, and families whose daily work directly impacts learners. Principal Investigators must hold an earned doctorate or relevant professional background and be affiliated with a public institution or non-profit organization capable of administering the award. Proposals must showcase genuine collaboration between academic researchers and frontline education practitioners, with budgets framed clearly and proposals submitted in English. By encouraging robust relationship-building and evidence-based inquiry, this funding stream empowers collaborative teams to address entrenched educational disparities and build sustainable research infrastructure for the long term.

16. Catalyzing Ambitious Research Planning to Re-envision More Equitable Educational Ecosystems

DONOR: Spencer Foundation **GRANT SIZE:** \$10,000 to \$100,000

Our team is drawing attention to a specialized planning award designed to help scholars and community collaborators lay the groundwork for large-scale, transformative research in education. Rather than funding fully realized research studies, this program provides dedicated time and resources for multidisciplinary teams to co-design evidence-based solutions and explore innovative ways to dismantle systemic inequities. Eligible applicants must hold an earned doctorate or terminal professional degree and maintain affiliations with qualifying non-profit organizations or public institutions capable of managing the award. The initiative welcomes international participation, provided all materials are presented in English with budgets detailed accordingly. Successful teams use this planning period to build shared visions, engage practitioners and policymakers meaningfully, and chart pathways toward fairer, more inclusive learning environments. For researchers and community stakeholders seeking to tackle deep-seated educational challenges from the ground up, this planning grant offers an essential foundation for future systemic reform.

17. Unlocking Breakthrough Potential in Human Immunology and Vaccine Development for Early-Career Investigators

DONOR: Michelson Medical Research Foundation **GRANT SIZE:** \$100,000 to \$500,000

Our editorial team is excited to share a prestigious research opportunity dedicated to advancing our understanding of the human immune system and accelerating next-generation therapies. Designed specifically for early-career investigators, postdoctoral fellows, clinical trainees, and advanced graduate students, the program seeks to overcome current roadblocks in immunology and vaccine science. Applicants are encouraged to bring cross-disciplinary perspectives from fields such as computer science, artificial intelligence, biochemistry, protein engineering, biophysics, and nanotechnology to challenge conventional methodologies. Researchers from diverse organizational settings—including academic institutions, biotechnology firms, and independent research institutes globally—are welcome to apply. While prior specialized experience in vaccinology is not strictly mandatory, candidates must clearly demonstrate how their proposed work will contribute meaningfully to the advancement of human health. By backing creative, high-impact thinkers early in their trajectories, this initiative aims to fast-track novel solutions to some of the world's most threatening diseases.

18. Enhancing Child Nutrition and Community Resilience Through Sustainable School Canteens

DONOR: Bel Foundation

Our research desk is featuring a targeted call for projects focused on transforming school meal systems to improve child nutrition and promote environmental sustainability. The initiative supports grassroots and structural enhancements, such as establishing vegetable gardens, developing market gardening areas, and forging direct partnerships with agricultural cooperatives to secure steady, sustainable supply chains. Furthermore, funded projects emphasize community involvement in daily canteen management alongside pedagogical activities that educate children about healthy food practices and mindful dietary habits. Eligible applicants include not-for-profit organizations operating in the public interest, with special attention directed toward regions where specific corporate partners maintain active operational footprints. The program strictly directs resources toward practical, on-the-ground project activities rather than general organizational overhead, ensuring tangible improvements in school food systems. Through these comprehensive interventions, organizations can foster lasting nutritional health, empower local communities, and equip students to become active participants in their own dietary well-being.

19. Unlocking New Perspectives in American Art Collections

DONOR: Terra Foundation for American Art **GRANT SIZE:** \$10,000 to \$100,000

Our editorial team is highlighting a funding opportunity aimed at helping cultural institutions worldwide rethink how they present their permanent holdings to the public. Museums, art centers, and community-based organizations can secure financial backing to broaden public understanding of American art through inclusive storytelling, local history integration, and collaborative programming. The program accommodates both initial planning efforts and full implementation stages for permanent reinstallations or temporary exhibitions drawn primarily from an institution's own inventory. Eligible organizations can apply support toward essential project costs, ranging from short-term research staff and convenings to conservation, gallery setup, and public outreach. Applicants must hold tax-exempt status or an international equivalent, and proposals must focus on the visual arts of the United States or Indigenous arts of North America while challenging traditional narratives. Interested groups begin the process by submitting an initial inquiry form before receiving an invitation to present a comprehensive proposal for evaluation by an external panel of arts professionals.

20. Advancing Drug Development and Research for Charcot-Marie-Tooth Disease

DONOR: CMT Research Foundation **GRANT SIZE:** \$10,000 to \$100,000

Our research desk has identified a specialized funding mechanism designed to propel innovative scientific investigations forward in the fight against Charcot-Marie-Tooth disease. The initiative centers on optimizing drug delivery within the peripheral nervous system, validating new therapeutic targets, and improving translational pathways toward human clinical trials. Two distinct tiers of support are available, accommodating both early-stage investigators seeking initial project backing and doctoral students conducting mentored laboratory studies. Investigators and clinicians operating within academic medical centers, universities, non-profit institutions, and specialized biotechnology companies worldwide are encouraged to put forward their proposals. For-profit entities focused on therapeutic discovery may also qualify when their work directly serves the mission of the supporting foundation. This targeted backing empowers emerging scientific leaders to generate rigorous data and accelerate life-changing breakthroughs for patients affected by this condition.

21. Empowering Mid-Career Researchers to Lead International Breakthroughs

DONOR: Wellcome **GRANT SIZE:** \$100,000 to \$500,000

Our editorial staff draws attention to a prestigious career development initiative tailored for mid-career investigators ready to step into international research leadership roles. Designed to run over an extended multi-year duration, the programme helps successful candidates drive innovative inquiries, shape new conceptual frameworks, and deliver meaningful advancements in health-related fields. Participants are expected to strengthen their leadership capabilities, foster a positive and inclusive research culture, and contribute to the training of the next generation of scientists. The opportunity accommodates researchers from any discipline who have already completed substantial investigative periods following their initial training and are actively guiding the work of others. Candidates holding permanent, tenure-track, or fixed-term contracts may apply, with flexible provisions established for those navigating career breaks, part-time schedules, or placements in developing regions. By the end of the award period, recipients should achieve widespread recognition and secure stable, long-term positions within their host organizations.

22. Strengthening Institutional Research Capacity in Ophthalmology for LMICs

DONOR: Velux Stiftung **GRANT SIZE:** \$100,000 to \$500,000

Our team is tracking a strategic grant program established to bolster long-term biomedical and clinical ophthalmology research capacity within institutions based in low- and middle-income countries. The initiative prioritizes sustainable structural development, local research ecosystem strengthening, leadership enhancement, and the creation of regional centres of excellence. Consortia involving at least one partner institution from an eligible developing nation can secure multi-year funding to support their institutional growth plans alongside aligned research activities. A significant portion of the awarded resources must directly benefit the local partner institutions and drive core capacity-building objectives. Participating organizations must operate on a not-for-profit basis and possess the legal readiness to handle international awards. This concerted effort enables developing regions to establish lasting expertise, foster interdisciplinary collaboration, and independently manage vital vision-health investigations for the long term.

23. Global Public Health Awards for Early-Career Investigators in Developing Regions

DONOR: Gilead Foundation **GRANT SIZE:** \$10,000 to \$100,000

Our editorial desk features a dedicated awards program created to nurture independent early-career investigators in low- and middle-income countries focusing on viral hepatitis and HIV research. The initiative targets junior faculty members, public health professionals, and post-doctoral researchers who are working to advance country-driven priorities and implementation science. Selected recipients gain vital resources to generate impactful evidence through academic publications and presentations, helping position them for future scientific leadership. Eligible applicants must hold an advanced terminal degree obtained within the past decade and currently serve within an academic institution, hospital, or public health ministry. Candidates must reside and conduct their research in designated regions across Africa, South Asia, South East Asia, or the Commonwealth of Independent States. By investing in these promising researchers, the program supports the cultivation of local expertise and strengthens public health responses where they are needed most.

24. Community and Environmental Advancement Support Through the Solvay Fund

DONOR: King Baudouin Foundation **GRANT SIZE:** \$10,000 to \$100,000

Our team highlights a funding call inviting non-commercial entities to propose initiatives that foster scientific education, environmental sustainability, and local community well-being. The fund prioritizes projects that inspire youth engagement in STEM fields, advance biodiversity and energy transition goals, or enhance the physical and psychosocial security of vulnerable populations. Eligible organizations must plan to execute their projects within a specified geographic radius surrounding the sponsor's operational sites. Applicants are required to submit their proposals through the designated online portal, adhering strictly to the provided guidelines and instructions. Following a thorough review process by the management committee, successful applicants receive financial backing to implement their community-focused plans. This opportunity provides a valuable avenue for local groups to turn innovative, public-benefit ideas into tangible regional improvements.

25. Scaling Social Impact: The Draper Richards Kaplan Foundation Open Initiative

DONOR: Draper Richards Kaplan Foundation **GRANT SIZE:** \$100,000 to \$500,000

Welcome to our curated spotlight on a major ongoing funding pathway designed to accelerate early-stage visionaries tackling pressing global problems. Our editorial team tracks programs that genuinely transform the sector, and this particular opportunity stands out for its unique combination of multi-year financial backing and intensive, hands-on operational support. The initiative seeks to uplift pioneering ventures that have successfully completed their pilot phases and are actively preparing for wider expansion. Eligible entities span traditional independent charities, mission-driven corporate structures, and fiscally sponsored groups charting a course toward organizational independence. Ideal candidates demonstrate early, measurable proof of impact while operating primarily across designated regions in Africa, Europe, India, and the United States, with occasional considerations elsewhere. Beyond financial capital disbursed over a multi-year timeline, selected changemakers gain invaluable in-kind assistance, including active board service and strategic guidance from seasoned professionals. This holistic approach ensures that growing teams can effectively refine their scaling strategies, strengthen leadership pipelines, and build lasting organizational resilience.

26. Empowering Early-Stage Change: DRK Foundation Capacity and Capital Support

DONOR: Draper Richards Kaplan Foundation **GRANT SIZE:** \$100,000 to \$500,000

Our resource team is closely following this ongoing opportunity tailored for pioneers launching innovative, systems-level interventions for underserved populations. This program centers on a robust tripartite philosophy combining financial capital, targeted capacity building, and a connected peer community. Early-stage entities—typically between two and five years old with validated models in the field—are encouraged to apply if they possess strong leadership and clear evidence of early traction. For for-profit applicants, the scope generally encompasses early-stage ventures looking for appropriate investment thresholds. Selected organizations benefit enormously from dedicated guidance, where senior leaders from the supporting foundation take on active board roles to steer strategic growth. This close mentorship is paired with specialized assistance covering financial modeling, talent acquisition, and fundraising mechanics, creating a comprehensive package of non-financial resources. By bridging the gap between early experimentation and sustainable scale, this opportunity equips visionary teams with the exact tools needed to amplify their community reach.

27. Advancing LGBTI Equality and Inclusion Across Southern Africa

DONOR: The Other Foundation **GRANT SIZE:** Less than \$1000

Civil society organizations operating in Southern Africa have a vital window to secure vital resources through this recent call for proposals closing in mid-2026. Administered by a dedicated regional funder, the program seeks to protect and advance the fundamental rights, dignity, and socio-economic participation of lesbian, gay, bisexual, transgender, and intersex individuals. Applicants can apply under specific tracks tailored for both emerging grassroots entities and more established organizational structures working to counter growing regional pushback. Supported initiatives range from evidence-based advocacy and public awareness campaigns to multi-country strategies addressing the specific needs of intersex persons, lesbian women, and transgender communities. Eligible participants must be legally based in one of thirteen designated Southern African nations and possess robust governance and financial management systems. By fostering cross-sector alliances, engaging religious and traditional leaders, and boosting workplace inclusion, this funding mechanism plays a crucial role in strengthening the broader equality movement throughout the region.

28. Unlocking Rights: Disability Rights Fund Open Call for Inclusive Futures

DONOR: Disability Rights Fund (DRF) **GRANT SIZE:** \$10,000 to \$100,000

Our editorial desk highlights this accessible funding stream aimed at strengthening the global movement led by persons with disabilities. With an application window stretching until mid-2026, the program invites grassroots, national, and regional organizations to champion disability rights alongside intersecting movements like gender justice, climate action, and economic equity. Following an inclusive open-call model for eligible regions across Africa, Asia, the Pacific, and Haiti, the initiative prioritizes organizations directly led by individuals with disabilities. Most awards under this cycle target short-term, impactful projects with manageable implementation windows, while regional applicants coordinating multi-country efforts are also welcomed. Successful groups may access general operating support provided they demonstrate robust community representation, active cross-movement collaboration, and a solid history of transparent grant management. This vital resource empowers disabled-led collectives to increase their visibility, influence policy decisions, and build truly inclusive societies from the ground up.

29. Mérieux Foundation Small Grants: Combating Infectious Disease Locally

DONOR: Mérieux Foundation **GRANT SIZE:** \$1000 to \$10,000

Grassroots organizations dedicated to improving public health in developing regions will find a timely opportunity in this recurring small grants initiative. Sponsored by a prominent health-focused foundation, the program provides targeted financial support for localized interventions aimed at reducing infectious diseases, with a distinct focus on maternal and child health outcomes. To qualify, applicant entities must be officially registered non-profits or public-interest foundations with a proven multi-year operating history and at least two years of relevant field experience. Proposed projects must be thoroughly grounded in local needs assessments, strictly aligned with existing public health frameworks, and implemented in close partnership with local authorities and beneficiary communities. Furthermore, submissions must embed strong ethical standards and gender equality principles to ensure long-term, sustainable impact. With review sessions held twice annually, this program offers grassroots actors a reliable pathway to secure vital resources for community-driven health solutions.

30. Saving Lives at Birth: Research Grants for Maternal and Newborn Health

DONOR: Laerdal Foundation **GRANT SIZE:** \$10,000 to \$100,000

Researchers and practitioners working in low-resource environments can now apply for a specialized research funding program closing in late 2026. Designed to advance practically oriented solutions targeting maternal and neonatal mortality, the initiative places special emphasis on critical interventions occurring on the day of birth, including the prevention of stillbirths. Eligible institutions—permitted up to two submissions per organization—must focus their efforts within designated target countries across Africa and Asia while aligning with broader global health development goals. The program encourages collaborative, scalable models that demonstrate genuine feasibility and incorporate institutional overhead considerations transparently. Successful applicants gain access to structured project funding alongside opportunities to collaborate with experienced local partners in challenging operational contexts. By prioritizing rigorous research paired with real-world application, this funding stream actively supports global efforts to safeguard maternal and newborn lives during childbirth.

31. Empowering Early-Career Conservationists: Sub-Saharan Mammal Field Research Initiative

DONOR: Jana Robeyst Trust Fund **GRANT SIZE:** \$1000 to \$10,000

Our editorial team is closely following an exceptional funding opportunity tailored for early-career biologists and conservation scientists dedicated to safeguarding endangered mammals across Sub-Saharan Africa. This initiative empowers independent investigators, regardless of their nationality, by providing critical support for rigorous field-based research, pilot studies, and ongoing conservation actions that address pressing ecological challenges. Successful applicants can secure vital resources to cover essential field equipment purchases as well as necessary travel costs for disseminating research findings at international conferences, workshops, and professional training programs. To qualify, submissions must demonstrate tangible conservation relevance, clear applied benefits for local ecosystems, and strict alignment with recognized regional priorities. Applicants must apply via a professional email address or verify active affiliation with a recognized academic institution, university, or nonprofit organization, while including a comprehensive CV with two professional referees. By lowering financial barriers for emerging scientists, this program plays a vital role in strengthening grassroots conservation capacity and generating actionable data for vulnerable wildlife populations throughout the region.

32. Catalyzing Purpose-Driven Enterprises for Social and Financial Inclusion in Asia

DONOR: DBS Foundation

At Grants For Global, we are highlighting a key impact-investment mechanism aimed at scalable, market-driven enterprises that are transforming the lives of vulnerable populations across dynamic Asian markets. This opportunity focuses on ventures working to expand access to critical human needs—such as quality healthcare, nutrition, foundational education, and mental health support—while simultaneously advancing digital literacy, financial inclusion, and employability pathways. The initiative also prioritizes innovative models that empower aging populations to live with dignity and purpose, ensuring long-term community resilience. Eligible businesses must be formally registered and operating within select economies, boasting a proven two-year track record of measurable social impact and a clear strategic plan for future expansion. The provided capital is strictly dedicated to growth-oriented milestones like product research, market entry, and infrastructure scaling, rather than legacy operational debts. Designed exclusively for commercial entities with mission-driven leadership, this program excludes charities and traditional nonprofits to focus purely on sustainable businesses capable of delivering deep, measurable systemic change.

33. Advancing Biodiversity Conservation Science: Regional Researcher and Doctoral Support

DONOR: Nagao Natural Environment Foundation (NEF) **GRANT SIZE:** \$1000 to \$10,000

Our research desk is spotlighting a dedicated scientific funding stream designed to bolster independent researchers and doctoral candidates investigating ecosystems, taxonomy, and biodiversity in the Asia-Pacific region. This program prioritizes field-based investigations involving living organisms, sustainable resource utilization, wildlife management, and the economic valuation of natural environments to inform practical conservation policies. By championing investigator-led rather than large-scale institutional projects, the initiative nurtures the next generation of environmental scientists working within their home countries or places of study. Eligible candidates must be nationals of developing nations in the region, acting either as full-time researchers with documented experience or as enrolled doctoral students possessing strong English proficiency. Successful recipients are expected to execute independent fieldwork and complete their data-driven studies within a multi-year timeframe, ensuring that generated insights directly contribute to regional nature preservation. This targeted support helps bridge the gap between academic inquiry and actionable ecological stewardship in fragile developing ecosystems.

34. Amplifying Conservation Knowledge: Academic Publishing Support for Regional Researchers

DONOR: Nagao Natural Environment Foundation **GRANT SIZE:** \$1000 to \$10,000

Our editorial team draws attention to an impactful publishing initiative created to bring vital scientific literature to light, focusing on nature preservation and ecosystem management across the Asia-Pacific region. This program helps researchers transform their primary investigations into printed books that educate academic peers, local communities, and the wider public on biodiversity and sustainable resource use. Funding is specifically earmarked to cover production expenses, including professional layout, interior design, and local distribution within the author's home country. Eligible applicants must be nationals of developing nations in the target region, working full-time as scientists or researchers at recognized local institutions, and serving as the primary author of the proposed book. The manuscript must be rooted in original research, written in English, bilingual formats, or the national language with robust English summaries, and free of copyright complications. By underwriting publication costs, this opportunity ensures that critical ecological findings escape academic silos and actively inform grassroots conservation and policy debates.

35. Investigative Journalism Initiative: Uncovering Farmed Animal Welfare Across Europe

DONOR: Journalismfund Europe **GRANT SIZE:** \$100,000 to \$500,000

Our editorial desk highlights a specialized reporting initiative inviting deep-dive investigative journalists and media houses to expose critical issues surrounding farmed animal welfare throughout Europe. This program champions independent, cross-border collaborative journalism that examines underreported systemic practices, regulatory gaps, and institutional challenges affecting agricultural animals. Selected media professionals receive vital backing to cover extensive research, travel, fieldwork, and dedicated working time necessary for uncovering complex, high-impact stories. The initiative seeks to elevate public awareness, foster transnational newsroom cooperation, and uphold rigorous journalistic standards on topics of vital European relevance. Proposals are meticulously evaluated based on editorial quality, feasibility, investigative value, and potential to drive meaningful public discourse. Through structured funding cycles, this opportunity empowers watchdogs to bring hidden industry realities into the public eye and strengthen the fabric of independent investigative media.

36. AID4SME Open Call: Harnessing AI and Data Solutions for Industrial Sustainability

DONOR: AID4SME **GRANT SIZE:** \$100,000 to \$500,000

Our research team is tracking an innovation-focused open call designed to empower small and medium-sized enterprises and agile start-ups to build cutting-edge artificial intelligence and data-driven solutions. The program addresses pressing industrial efficiency challenges and large-scale resource optimization goals that align directly with broader European Green Deal sustainability targets. Participating ventures receive substantial financial backing alongside comprehensive coaching, mentoring, and specialized training to accelerate product testing, validation, and market readiness. The initiative welcomes both independent enterprises and collaborative consortia involving industry integration partners, research organizations, and nonprofits to facilitate real-world testing grounds. By bridging the gap between high-tech capability and industrial implementation, this program enables disruptive innovators to scale their technologies and drive measurable ecological efficiency across sectors like automotive, energy, and advanced manufacturing.

37. Empowering Investigative Journalism Across the Balkans and Visegrad Region

DONOR: Balkan Investigative Reporting Network **GRANT SIZE:** \$1000 to \$10,000

Our editorial team is closely following an open call designed to support independent journalists and dynamic journalism teams based within the Visegrad and Balkan regions. This opportunity focuses specifically on producing rigorous, in-depth reporting that tackles critical democracy-related challenges, including political dynamics, economic shifts, human rights concerns, systemic corruption, the rule of law, and regional security matters. Successful candidates receive vital financial backing to offset reporting-related expenditures such as professional fees, investigative travel, documentation, photography, and videography. Beyond direct financial support, selected grantees gain access to valuable editorial mentorship and guaranteed publication channels through the initiative's primary network. The review process begins with an initial screening for completeness and basic eligibility by program coordinators, followed by a thorough evaluation by an editorial board assessing originality, relevance, overall quality, feasibility, and expected audience reach. This program provides an excellent platform for reporters aiming to shed light on vital developments impacting Central and Southeast Europe.

38. Restoring European River Ecosystems Through Strategic Dam Removals

DONOR: Open Rivers Programme

Our research desk highlights a dedicated funding mechanism aimed at healing European freshwater systems by dismantling small dams and other artificial barriers that disrupt river connectivity and hinder natural ecosystem recovery. The initiative encompasses a diverse range of activities, stretching from preliminary barrier identification, technical feasibility studies, and permitting preparation to actual demolition works and comprehensive post-restoration monitoring. Depending on the specific track, eligible applicants typically include charitable organizations, non-profits, and occasionally public sector entities working independently or alongside cross-sector partnerships involving academic institutions, local communities, and government bodies. Grantees tackle obstacles like weirs, culverts, and sluices to help reinstate natural sediment transport, fish migration pathways, and overall biodiversity across Greater Europe. Projects are generally structured for completion within a twelve-month timeframe and must demonstrate strong backing from local stakeholders and relevant public administrations. This resource guide entry emphasizes how essential preparatory steps and targeted removals collectively breathe new life into fragmented river networks.

39. Catalysing Sustainable Forestry Practice Through Science-Practitioner Collaboration

DONOR: Velux Stiftung **GRANT SIZE:** \$100,000 to \$500,000

Our editorial staff is tracking an active call for proposals aimed at fostering transformative, solution-oriented research that bridges the gap between academic science and active forestry practitioners. The program seeks to accelerate evidence-based approaches that redefine how forests are managed, valued, and utilized in the face of modern ecological challenges. By encouraging novel research partnerships, the initiative supports projects that enhance climate change adaptation, bolster biodiversity recovery through integrative management, and unlock vital financial investments in sustainable forestry. Eligible consortia must feature at least two institutional partners, with the primary investigator anchored in an academic or research institution situated across eligible European nations. The scope emphasizes innovative, outside-the-box investigations capable of driving tangible behavioral shifts in forestry practices, while explicitly excluding purely localized case studies, urban forestry initiatives, or community projects lacking a rigorous scientific foundation. This opportunity serves as a crucial catalyst for translating ecological research into actionable, long-term industry standards.

40. Accelerating Net-Zero Business Innovation and Clean Technology Adoption

DONOR: Piedmont Innova Foundation **GRANT SIZE:** \$10,000 to \$100,000

Our editorial team presents an open funding initiative crafted to empower small and medium-sized enterprises and ambitious start-ups as they navigate the green and digital transition. The program is tailored to accelerate the integration and scaling of critical net-zero technologies—spanning solar power, advanced energy storage, hydrogen systems, sustainable biogas, and carbon capture solutions—alongside vital business process innovations. Eligible companies can secure targeted financial support for the vital planning and technology transfer phases required to upgrade their commercial products, operational services, and internal processes. To qualify, applicant enterprises must meet standard small business criteria, demonstrate at least one closed and validated financial year, and be officially established within eligible participating economies. The framework is structured to distribute resources across a select cohort of innovative businesses, helping them enhance their clean technology footprint without encountering administrative hurdles. This opportunity represents a practical stepping stone for commercial entities striving to modernize their operations and contribute meaningfully to regional net-zero targets.

41. Advancing Sustainable Technologies Through Earth-Abundant Materials Research

DONOR: Novo Nordisk Foundation **GRANT SIZE:** More than \$1 million

Our resource desk outlines an ambitious challenge program designed to transform materials science by empowering collaborative research consortia to pioneer sustainable technologies using Earth-abundant elements. The initiative fosters deep interdisciplinary synergy across physics, engineering, chemistry, materials science, and data science to discover and characterize novel materials that can match or exceed the performance of scarce resources. Teams composed of multiple independent research groups work toward ambitious, high-risk scientific visions that tightly integrate experimental laboratory methods with advanced computational modeling and machine learning. Main applicants must be tenured or tenure-track researchers leading active groups at European host institutions, with at least one key participant rooted in a domestic research hub, while co-applicants may collaborate globally. The funding supports extensive, multi-year projects aimed at fundamental material discovery within early technology readiness levels. This program offers a monumental platform for researchers dedicated to replacing rare materials with abundant alternatives for a sustainable technological future.

42. Pioneering Rapid Diagnostics for Lower Respiratory Infections and AMR

DONOR: Novo Nordisk Foundation **GRANT SIZE:** More than \$1 million

Our team highlights a targeted funding opportunity dedicated to supporting breakthrough collaborative research that creates rapid, affordable, and minimally invasive diagnostic tools for lower respiratory tract infections. The initiative focuses on accelerating early-stage innovations, validating novel biomarkers, uncovering disease-specific analytes via data-driven methodologies, and sharply improving predictions for antimicrobial resistance. By championing interdisciplinary teamwork across clinical medicine, microbiology, computer science, and physics, the program strengthens broader scientific ecosystems across Europe. Eligible consortia must bring together multiple research groups led by an independent tenured or tenure-track principal investigator housed at a European research institution, with mandatory representation from a domestic host organization. The initiative provides substantial, multi-year backing for ambitious projects that unite clinical expertise with advanced technical innovation. This funding stream is vital for equipping healthcare systems with the advanced diagnostic instruments needed to combat complex respiratory infections effectively.

43. Advancing Hybrid Bio-Electrocatalysis Research through Interdisciplinary Consortia

DONOR: Novo Nordisk Foundation **GRANT SIZE:** More than \$1 million

Our editorial team is closely following this open call designed to support pioneering, high-risk interdisciplinary investigations that drive forward hybrid bio-electrocatalysis. By bringing together collaborative researcher networks across European institutions, this funding vehicle aims to generate profound mechanistic breakthroughs rather than relying solely on incremental data collection or predictive modeling. Successful consortia must carefully structure their efforts to stay strictly within the defined thematic scope, ensuring that purely chemical catalysis, plant photosynthesis, and broad environmental remediation projects are excluded. Instead, the focus remains squarely on deepening foundational scientific insights into bio-electrocatalytic pathways through multi-institutional teamwork. Eligible teams typically consist of compact groups of independent researchers, where the principal investigator must demonstrate robust, long-term employment commitment at a qualified European research entity. Furthermore, at least one participating investigator must be anchored at a Danish institution, though broader global partnerships are warmly welcomed to enrich the scientific dialogue. While commercial entities and industrial partners are permitted to collaborate closely on these scientific ventures, they are structurally barred from drawing direct financial support from the grant pool. Through this multi-year funding opportunity, selected consortia gain the financial backing necessary to tackle complex biochemical bottlenecks and strengthen the broader regional research ecosystem.

44. Investigating the Critical Intersection of Extreme Heat and Hypertension

DONOR: Novo Nordisk Foundation **GRANT SIZE:** More than \$1 million

As global climate shifts amplify extreme weather patterns, this timely funding opportunity invites collaborative scientific teams to dissect the dangerous nexus between high ambient temperatures and cardiovascular vulnerabilities. The initiative specifically encourages translational and interdisciplinary projects that illuminate how heat stress triggers or worsens hypertension and elevates related mortality rates. Researchers delve deeply into complex cellular mechanisms, systemic thermoregulation pathways, and the unintended pharmacological ways common blood pressure medications might interfere with the body's natural cooling systems. By combining clinical data, demographic indicators, and novel biomarkers, participating research groups aim to build sophisticated risk-profiling tools and dramatically improve patient management guidelines during climate-driven heatwaves. To qualify for this multi-year collaborative support, applicants must organize into tight consortia comprising a dedicated main investigator alongside a select group of co-investigators based across European and international institutions. The lead applicant must maintain a substantial, secured employment arrangement at a recognized non-profit research host organization, and at least one team member must be affiliated with a Danish institution. Although industry stakeholders are welcome to contribute their expertise as project partners, they are ineligible to receive direct financial allocations from the grant. Ultimately, this program empowers multidisciplinary teams to generate life-saving clinical insights and actionable healthcare strategies for vulnerable populations facing extreme environmental pressures.

45. Promoting Health and Well-being in Vulnerable Childhood Social Initiatives

DONOR: Novo Nordisk Foundation **GRANT SIZE:** \$500,000 to \$1 million

At Grants For Global, we frequently highlight initiatives that bridge the gap between social support and public health, making this funding call an essential resource for community-focused organizations. The program specifically targets projects dedicated to improving the physical and mental health outcomes of young children experiencing socioeconomic or environmental vulnerability. By encouraging cross-sectoral intervention models, the initiative helps practitioners seamlessly integrate health-promoting strategies into existing social welfare frameworks, thereby expanding organizational capacity to address deeply entrenched health inequities. Non-profit organizations and public institutions operating within designated northern territories can apply to lead these multi-year community interventions, which directly engage children, their families, and surrounding professional networks. While academic and research institutions are welcome to participate as supporting co-applicants, leadership of the initiative must remain with qualified community and public sector managers. Approved budgets can thoughtfully allocate resources toward essential project expenditures, including specialized staff salaries, vital field equipment, travel, and targeted knowledge-sharing activities such as conferences and public dissemination materials. By fostering innovative, community-based solutions, this opportunity empowers local organizations to build lasting frameworks that safeguard the holistic well-being of disadvantaged youth during their most formative years.

46. Nordic Project Grants for Industrial and Environmental Biotechnology

DONOR: Novo Nordisk Foundation **GRANT SIZE:** \$500,000 to \$1 million

This dedicated funding stream supports independent faculty researchers across the Nordic region who are driving innovation in sustainable, scalable biotechnological applications. The program champions scientific inquiries that engineer biological systems for eco-friendly chemical and material production, enhance biomanufacturing efficiency, and pioneer advanced tools for tracking environmental microbes. Projects must clearly articulate a pathway toward commercial or operational scalability while delivering measurable benefits to global sustainability efforts. Eligible main applicants must hold faculty-level positions with independent research mandates at academic or non-profit institutions throughout the Nordic countries and must have their core salary independently secured for the entire project lifecycle. Research teams can incorporate up to five independent co-investigators from around the globe, alongside non-funded industry collaborators who bring valuable real-world perspectives to the laboratory. The funding supports various operational expenses, including technical staffing, essential laboratory equipment up to specified annual caps, travel, and scientific publications, while intentionally excluding general institutional overhead and commercial venture costs. By providing flexible, medium-term support, the program enables Nordic scientists to push the boundaries of green biotechnology and accelerate the transition toward a circular bioeconomy.

47. Fostering Sustainable Plant Science and Agri-Food Biotechnology Innovations

DONOR: Novo Nordisk Foundation **GRANT SIZE:** \$500,000 to \$1 million

Our research team recognizes the vital importance of transforming agricultural value chains, making this Nordic funding opportunity a crucial catalyst for high-risk, fundamental life sciences research. The program invites academic innovators to explore pioneering solutions in plant science, precision fermentation, cellular agriculture, and alternative food ingredients derived from fungi, algae, and microorganisms. By emphasizing circularity, enhanced biodiversity, and resource efficiency, the supported projects aim to fundamentally reshape modern food production and reduce the environmental footprint of global agriculture. Eligible researchers must be established faculty members or independent principal investigators stationed at qualifying academic and research institutions across participating Nordic countries. The grants provide flexible support spanning up to several years, allowing multidisciplinary teams to pursue bold, exploratory hypotheses that stretch well beyond current state-of-the-art agricultural practices. While the scope intentionally steers clear of clinical trials, pharmaceutical developments, and conventional livestock or aquaculture studies, it offers a robust platform for life scientists dedicated to long-term food security and sustainable ecological systems. Through these grants, participating researchers gain the financial autonomy needed to test unconventional concepts and translate basic biological discoveries into tangible agricultural advancements.

48. Empowering Civil Society to Prevent and Combat Gender-Based Violence

DONOR: Bodossaki Foundation **GRANT SIZE:** \$10,000 to \$100,000

Civil society organizations operating in Greece and Cyprus have a vital opportunity through this regional program to spearhead grassroots interventions against gender-based violence. Co-funded by European structural mechanisms and managed by an experienced consortium of human rights and foundation partners, the initiative addresses critical forms of abuse, including domestic violence, sexual assault, cyber violence, and other harmful traditional practices. The overarching goal is twofold: to strengthen frontline prevention and support mechanisms while simultaneously building the long-term institutional resilience, advocacy capacity, and sustainability of local CSOs. The program features distinct funding streams tailored to both larger, collaborative partnerships and smaller, single-entity organizations, ensuring that grassroots actors of varying scales can access necessary resources. All funded initiatives must strictly adhere to trauma-informed, survivor-centered, and rights-based methodologies that prioritize personal dignity, physical safety, and confidentiality. Furthermore, successful proposals must explicitly consider the intersectional vulnerabilities faced by marginalized populations, including migrants, LGBTIQ communities, individuals with disabilities, and ethnic minorities. By channeling vital resources directly to frontline advocates, the program fortifies regional networks dedicated to eradicating violence and promoting equality across society.

49. Advancing Brain and Intelligence Research Across the Nordic Region

DONOR: Nordic Mensa Fund **GRANT SIZE:** \$10,000 to \$100,000

Our editorial team is tracking a valuable funding pathway designed to elevate scientific inquiry into the complexities of human intelligence and brain function. This initiative supports investigations touching on medical, psychological, sociological, and educational dimensions, while placing a strong emphasis on sharing discoveries with wider public audiences. Eligible investigators can apply for project support to cover direct operational expenses, personnel wages, academic travel, and public communication efforts, provided they maintain a clear institutional, residential, or national connection to Sweden, Finland, Norway, or Denmark. The application package requires a concise research plan, a targeted budget, an academic curriculum vitae, a public-facing project summary, and a designated reference contact. Beyond direct project support, the scheme recognizes exceptional published literature through specific author accolades honoring recent peer-reviewed scientific articles. Grantees receiving larger awards typically receive the majority of their allocation upfront, with the remainder released upon the successful completion and approval of a comprehensive final report submitted within a designated timeframe.
